

Skills Review

Preparing for apprenticeships

Skills Review is a self-assessed skills gap analysis that enables a learner and their employer to review, input and evidence **prior learning** against the key areas of knowledge, skills, competence and behaviours that are part of the apprenticeship standard.

Our **Skills Review** software has been built specifically to self-assess that the apprenticeship is an appropriate training programme for the individual, and what is needed to reach occupational competency. This is validated remotely by the employer and training provider.

Skills Review is a detailed self-assessment skills gap analysis of the knowledge, skills and behaviours within the apprenticeship standard.

The result is validated by the employer and provider to accurately capture an individual's true starting point.

This makes **initial assessment more than English and maths** by assessing against the apprentices' occupational competency within their apprenticeship.

You'll have the data to make evidence-based adjustments to delivery to ensure the programme of learning is suitable for the apprentice and support their overall engagement.

Evidencing prior learning and supports dialogue with the employer employer and evidencing any cost adjustments that need to be made.

Skills Review helps you keep the employer up to date on the apprentice's progress throughout their apprenticeship to continuously monitor

"Skills Review is a well-researched and developed tool to aid with the identification of prior learning and ensure on programme learning is tailored to help the apprentice with learning, progression and successful achievement of end-point assessment."
