Assignment 2:	4
Task 1	5
Task 2	9
Examiner commentary	77
Grade descriptors	77
Document information	80
Change History Record	80

Introduction

The material within this document relates to the Digital Infrastructure occupational specialism sample assessment. These exemplification materials are designed to give providers and students an indication of what would be expected for the lowest level of attainment required to achieve a pass or distinction grade.

The examiner commentary is provided to detail the judgements examiners will undertake when examining the student work. This is not intended to replace the information within the qualification specification and providers must refer to this for the content.

In assignment 2, the student must first consider a list of job requests and prioritise them, before actioning the requests. The second task requires them to produce an instructional document and video that can be used by new employees to the company.

After each live assessment series, authentic student evidence will be published with examiner commentary across the range of achievement.

Assignment 2:

Scenario

Willow Technology is planning an upgrade on the backend servers. As part of this upgrade, a small test system needs to be developed that can be used to test the compatibility with the existing backend systems and explore the features of the latest server operating system.

During this assignment you will be required to undertake 2 practical tasks covering cable creation, and the installation and configuration for the new test system that will be used to simulate the new network.

Task 1

It is recommended that you spend 20 minutes on this task.

(4 marks)

Instructions for students

Before you create the test system, a custom length network cable needs to be created to enable the test system to connect to a network port.

You have been provided with a length of Cat5e ethernet cable, 4 x RJ45 ends and suitable cable creation tools.

You need to:

- create a straight through network cable
- provide annotated evidence that the cable has been created correctly
- test that the cable works and provide suitable evidence of the process of validating your cable

You will have access to the following equipment:

- a 1m length of Cat5e ethernet cable
- four RJ45 connectors
- cable creation tools – crimping tool, cable cutter
- network cable tester
- digital camera
- word processing software

Evidence required for submission to NCFE

Annotated photographic evidence of the following stages of cable creation should be provided:

- both RJ45 ends have the strands of cable in the correct order and forming a good connection
- an image of each cable strand being tested on the cable tester to verify connection

Note: this will require 8 or 9 images depending on the cable testing device used.

Student evidence

Task 1

RJ45 connected

All the copper connectors connect with the cable

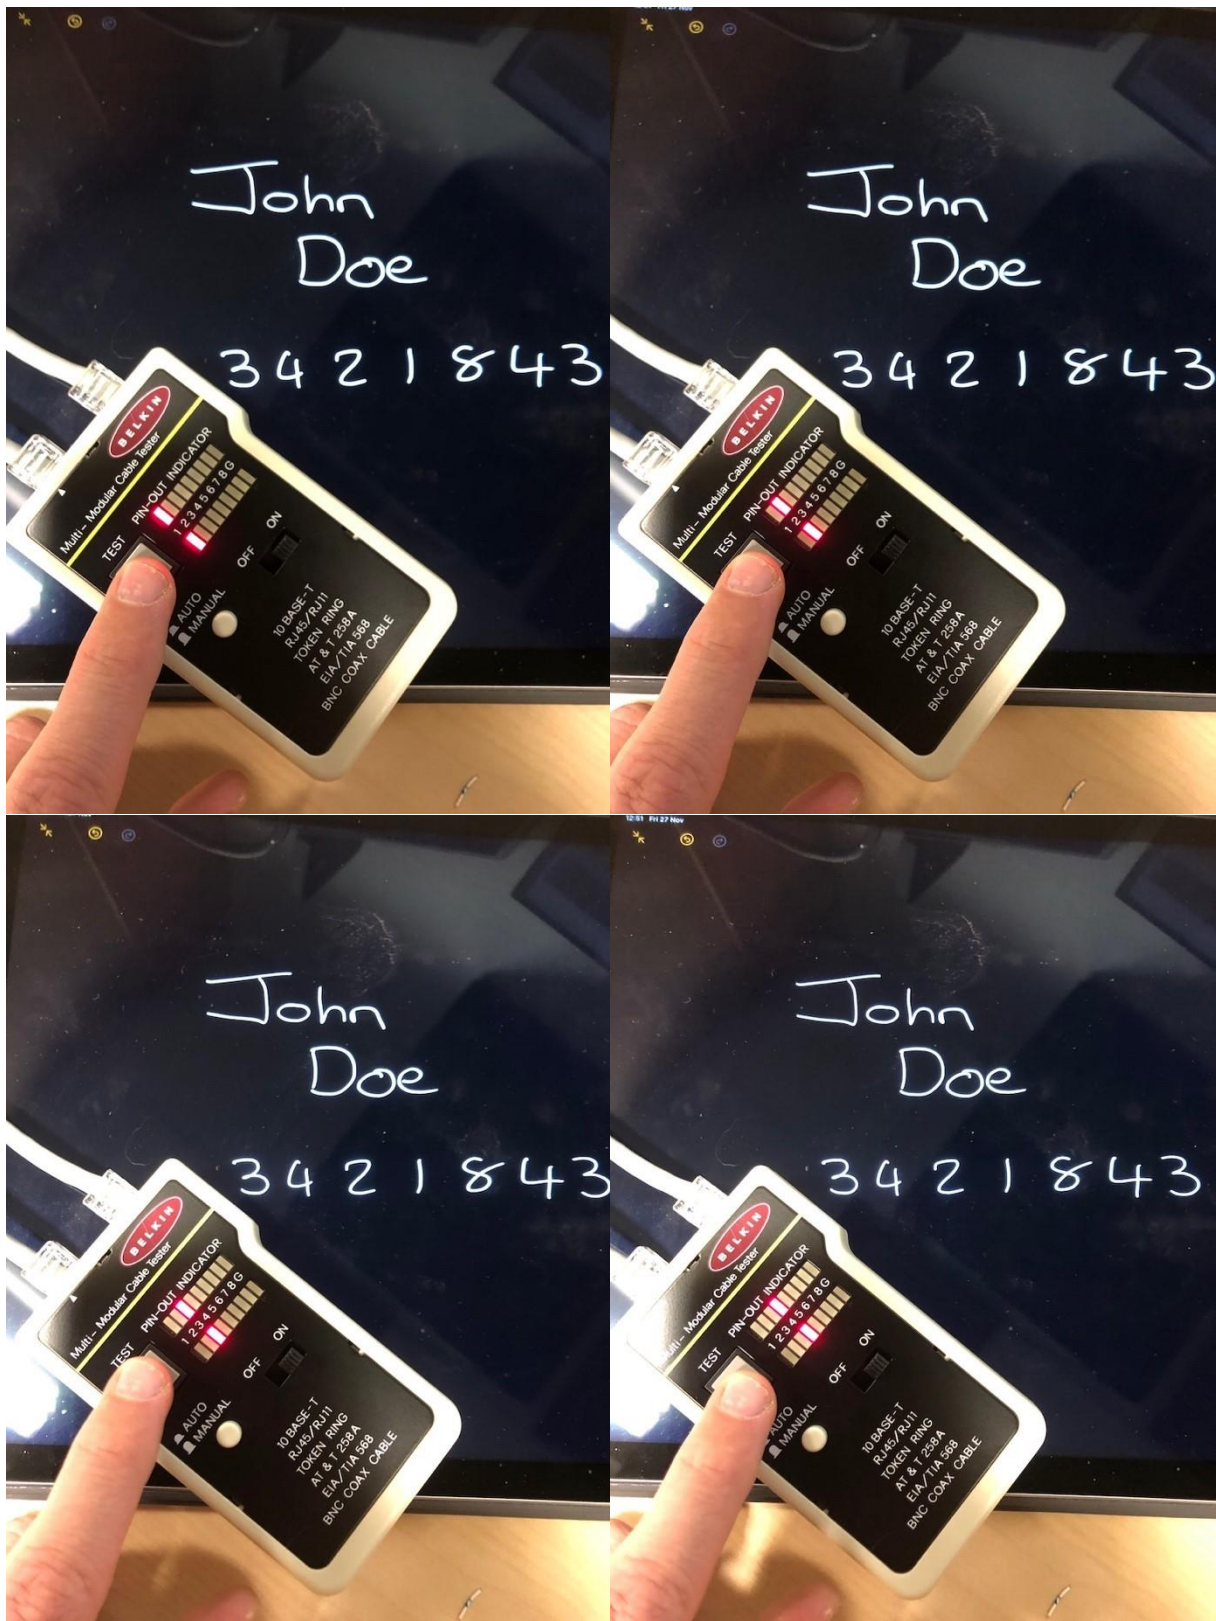

All the ends of the cable are arranged correctly

The plastic cover is at the right depth to catch under the fixing in the RJ45 end

Cable testing

The cable tester lights show that each strand is working correctly

These photos show that the cable is made correctly and tested as working. Each photo shows one of the pins and confirms a signal can be carried on each wire in the cable.

Task 2

Essential information

It is recommended that you spend 5 hours 40 minutes on this task.

(49 marks)

Equipment

You have been provided with 4 computers. These might be 4 physical machines, or 1 machine with 4 virtual machines. You are required to develop the test system based on the specification outlined by your line manager.

The following information regarding the implementation of the network has been provided:

- Server01 – this will be the domain controller, DNS and DHCP server, no operating system installed
- Server02 – secondary server, file server and another role server, no operating system installed
- PC01 – desktop machine, no operating system installed
- PC02 – desktop machine, operating system pre-installed
- one wireless device, for example, wireless printer, media sender or IP camera recommended
- one optional access point/wireless router/wireless print server

In addition, you will have access to:

- digital camera
- word processing software
- sample files for step C

Network information

The following information outlines the settings you will need to use when configuring the network:

- Subnet – 255.0.0.0
- Server01 IP address – 10.1.1.1 and 10.1.1.2
- Server02 IP address – 10.1.1.3
- DHCP scope – 10.1.1.5-10.1.1.10
- default gateway – 10.1.1.254 (no internet access provided)

Evidence required for submission to NCFE

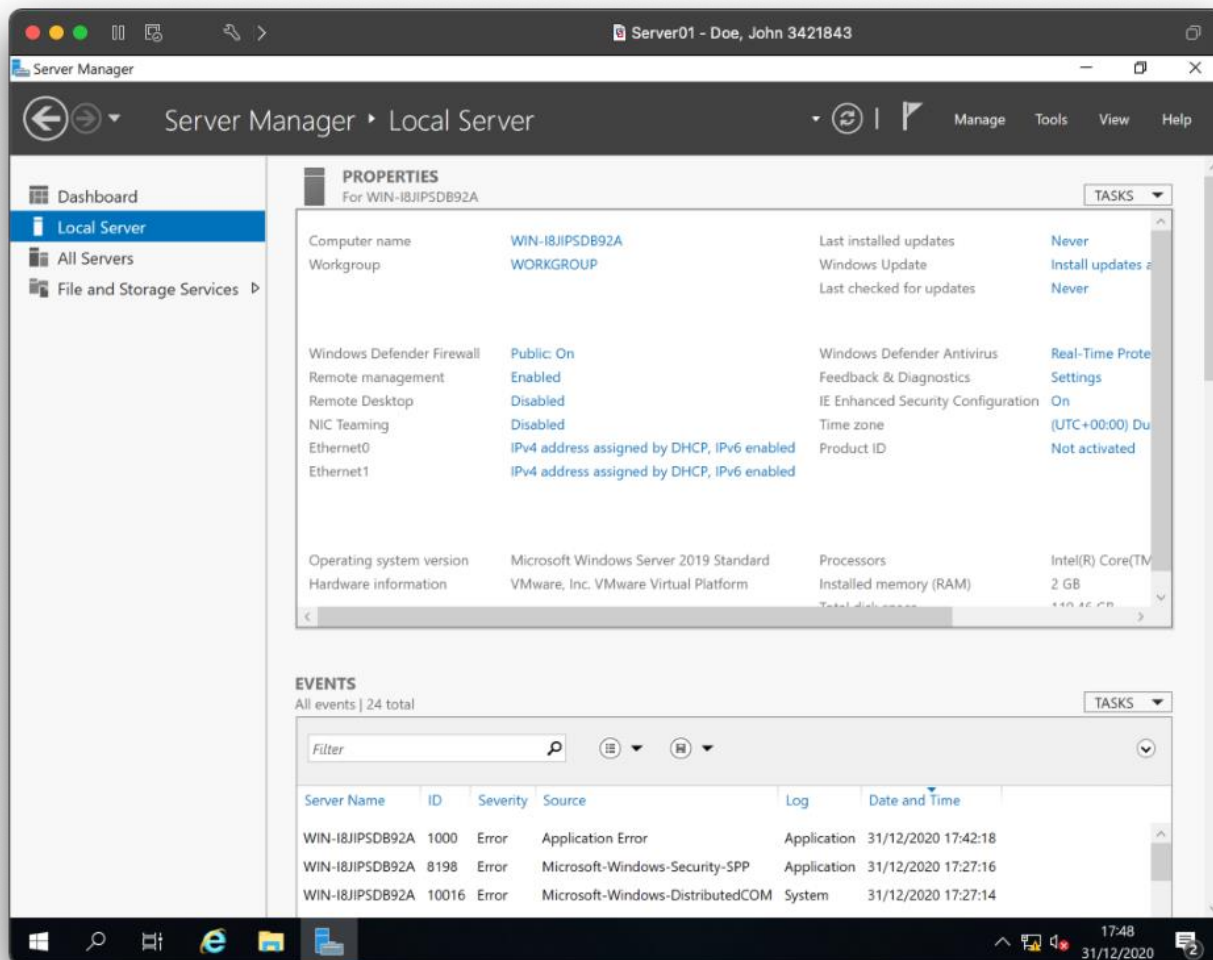

- you must take print screens and/or photographs of the processes you have carried out
- use the tick box in the evidence required column to ensure that all the required print screens and/or photographs have been provided

Student evidence

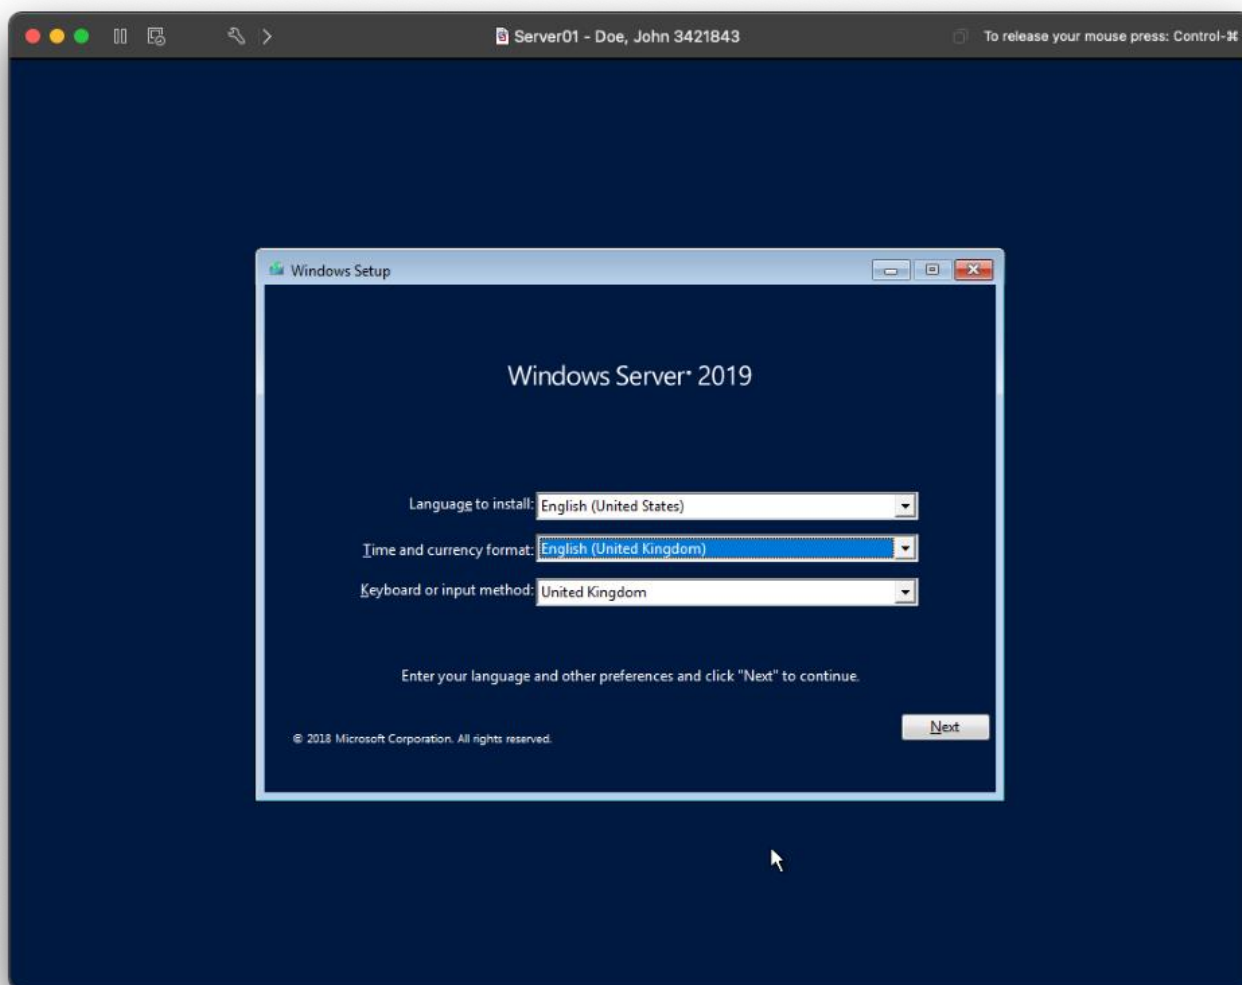

Step A

Server01 installation and configuration

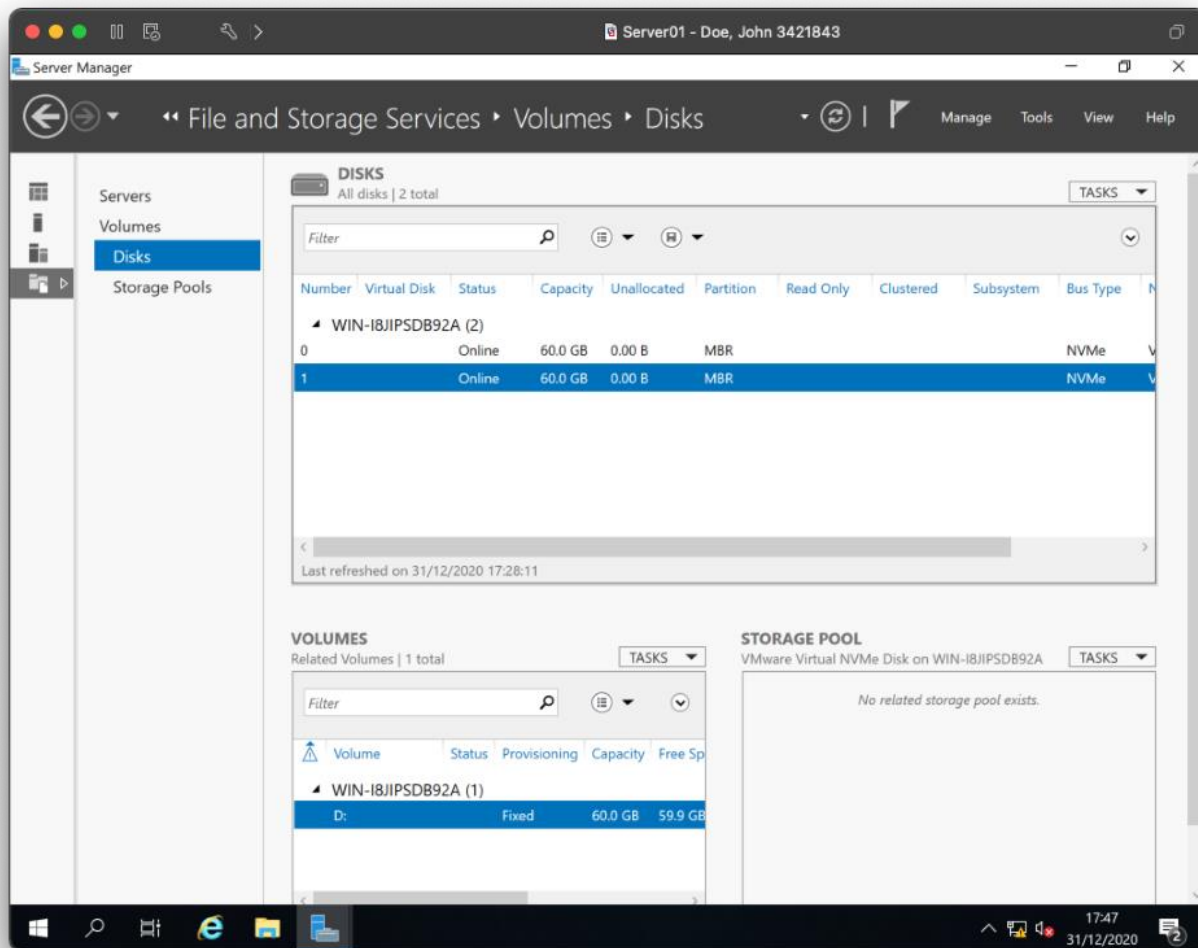

- this screen shot demonstrates that the operating system has been installed

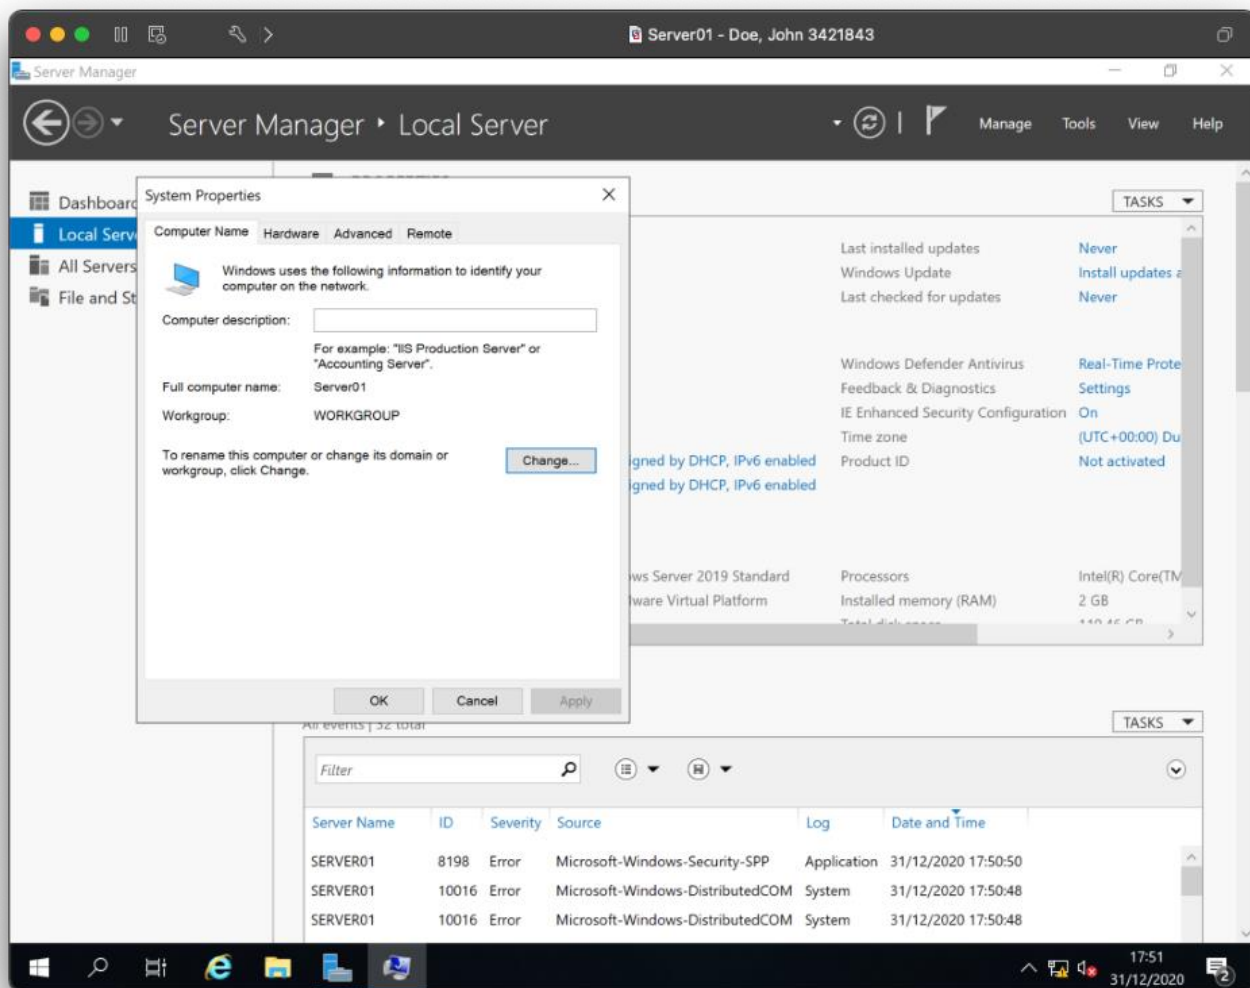

- this demonstrates that I have selected suitable region and language settings

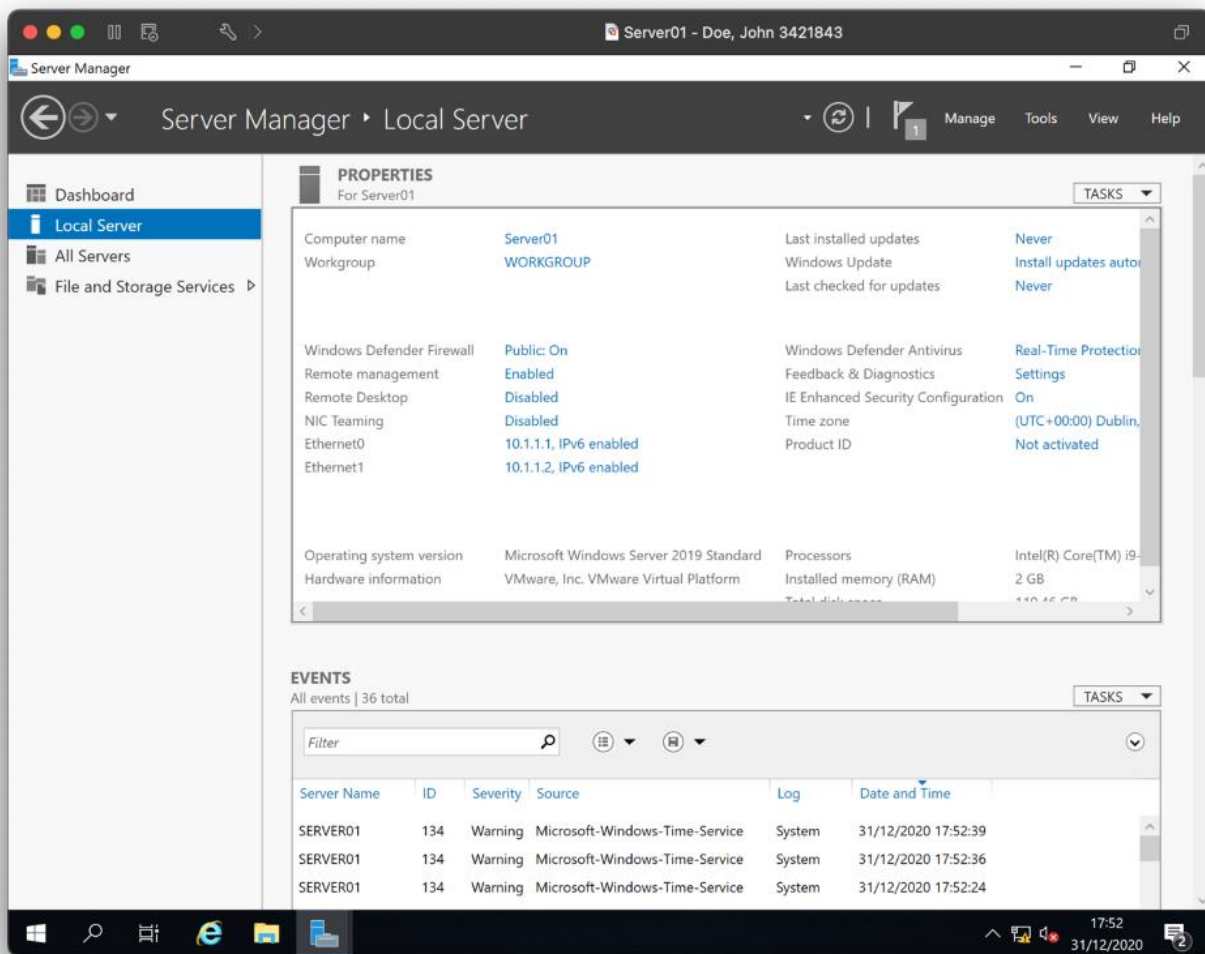

- this demonstrates I have configured the disk partitions

- this demonstrates the machine has been named correctly

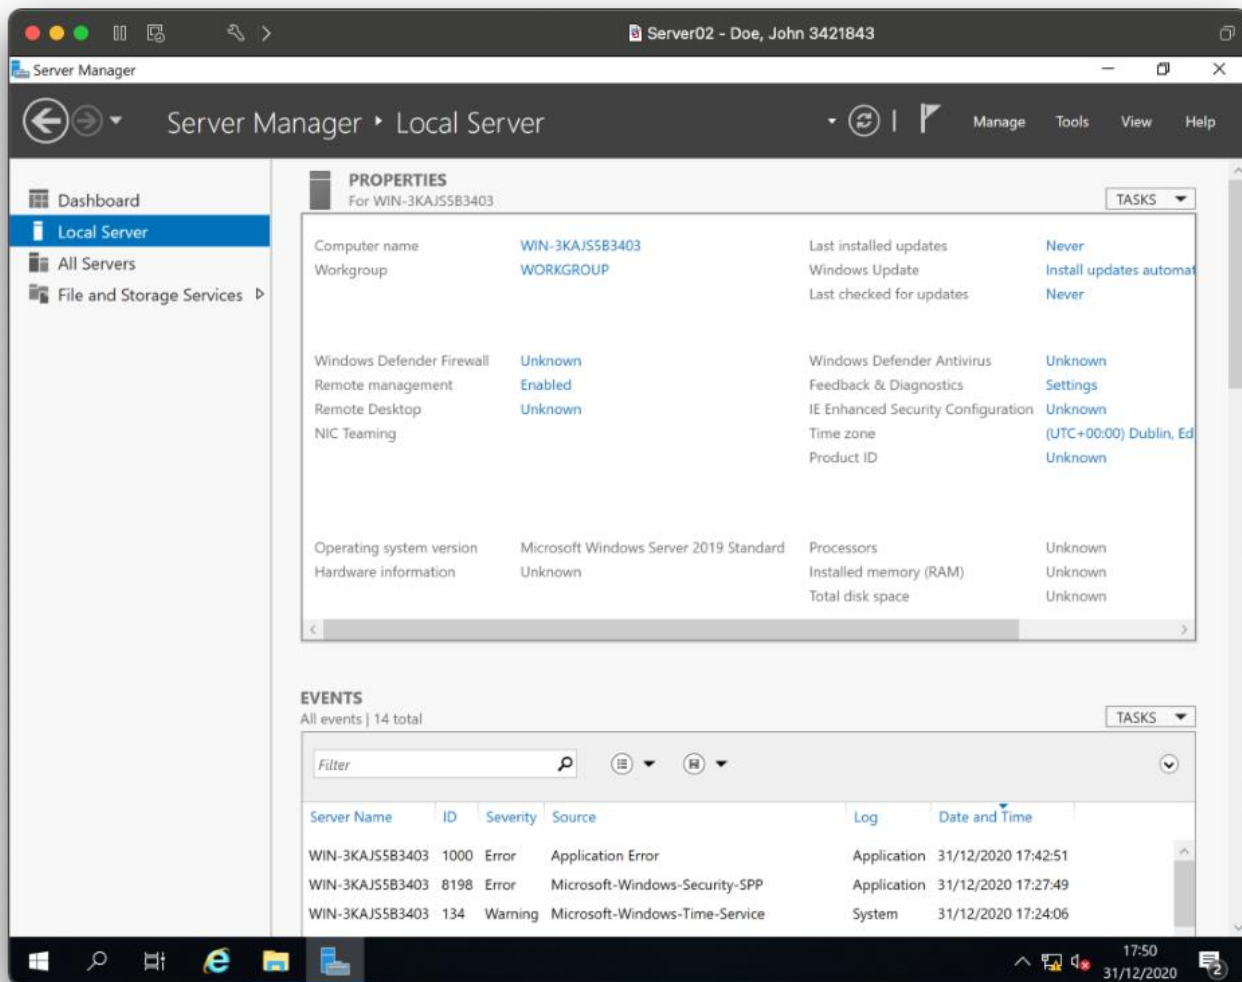

- this shows that I have fixed IP addressing set

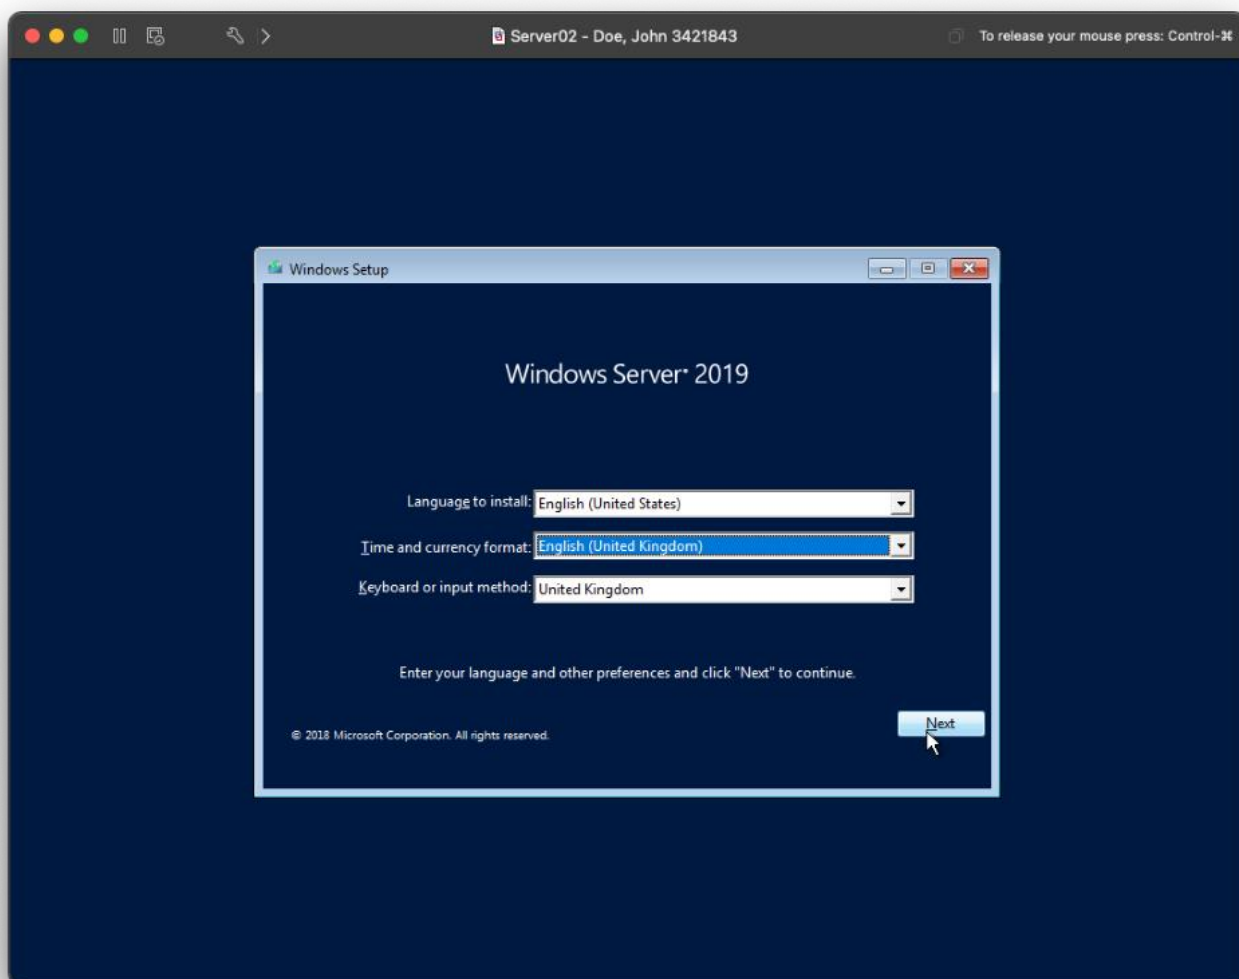

Server02 installation and configuration

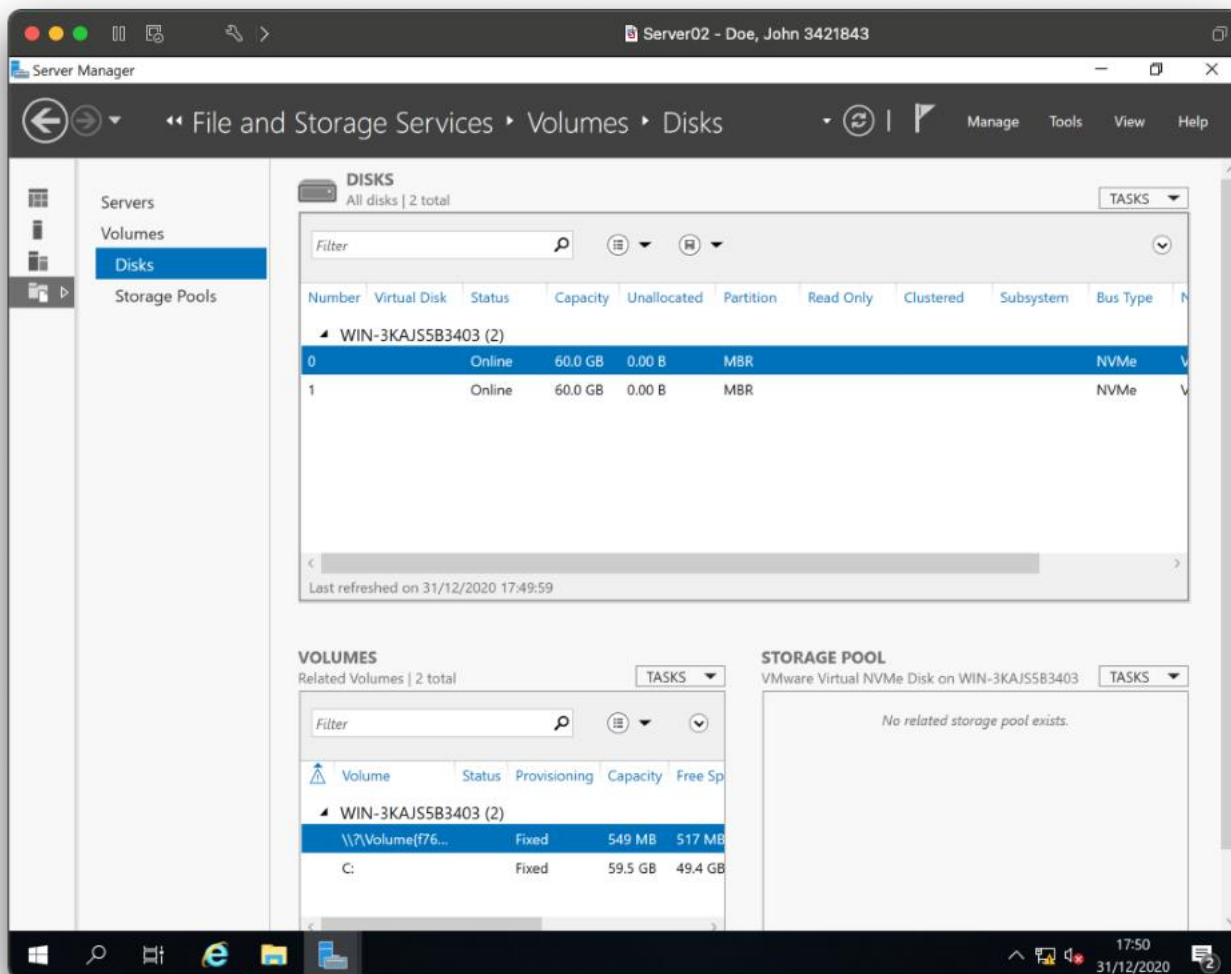

- this demonstrates that I have installed the operating system

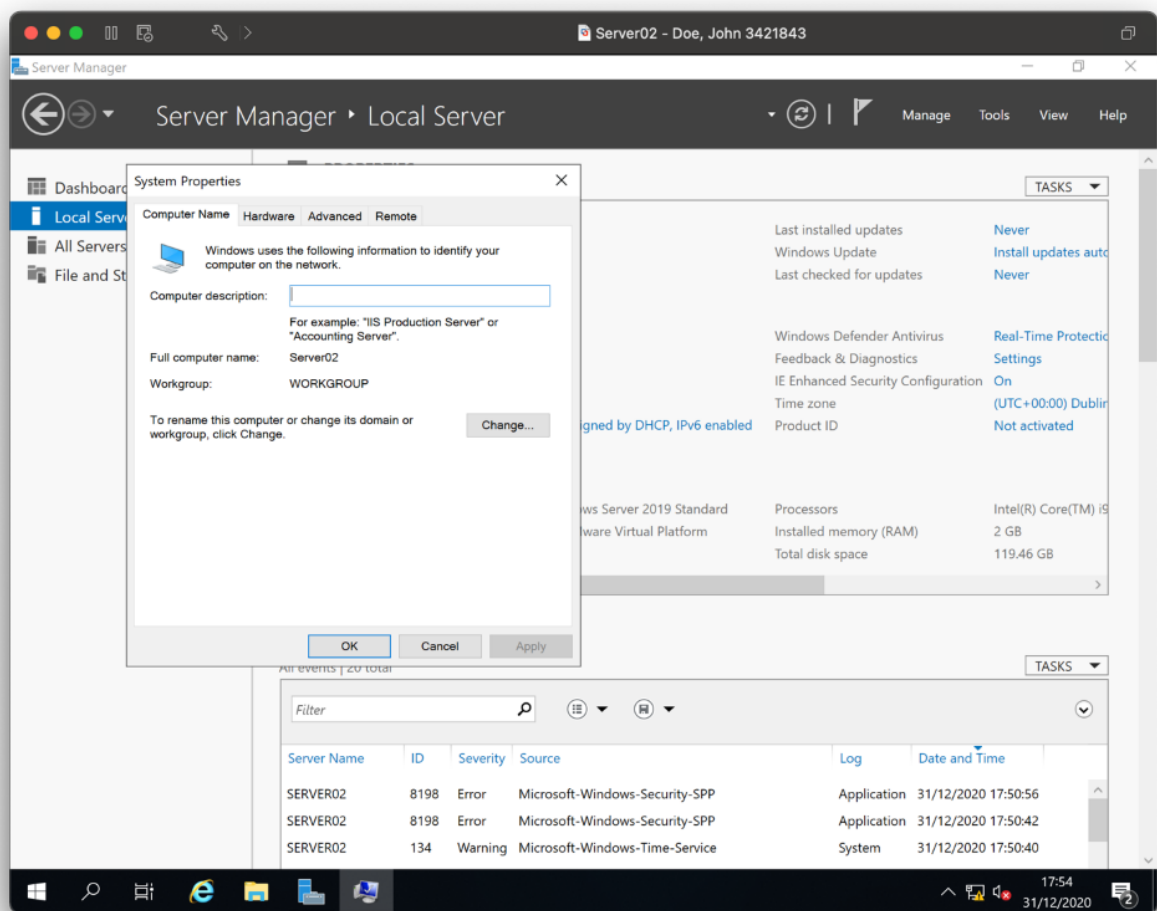

- suitable region and language settings

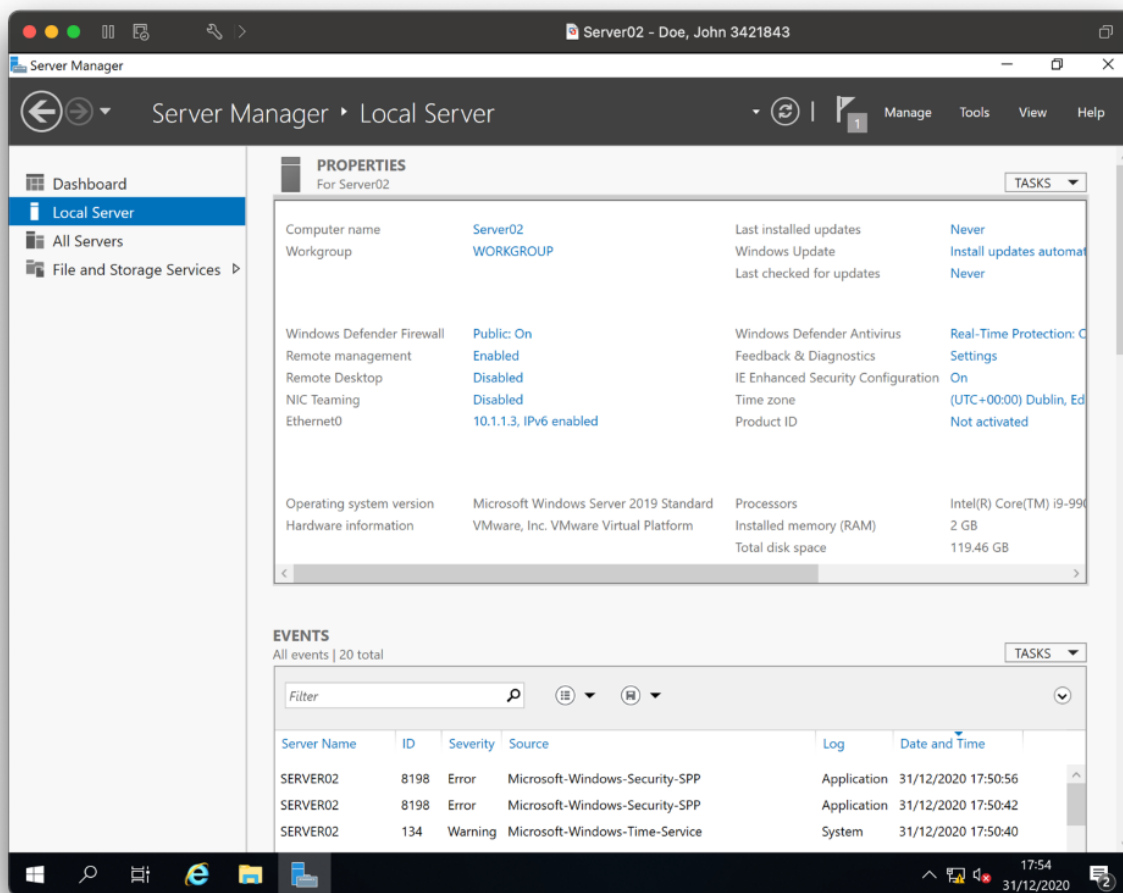

- disk partitions

- machine named correctly

- fixed IP addressing set

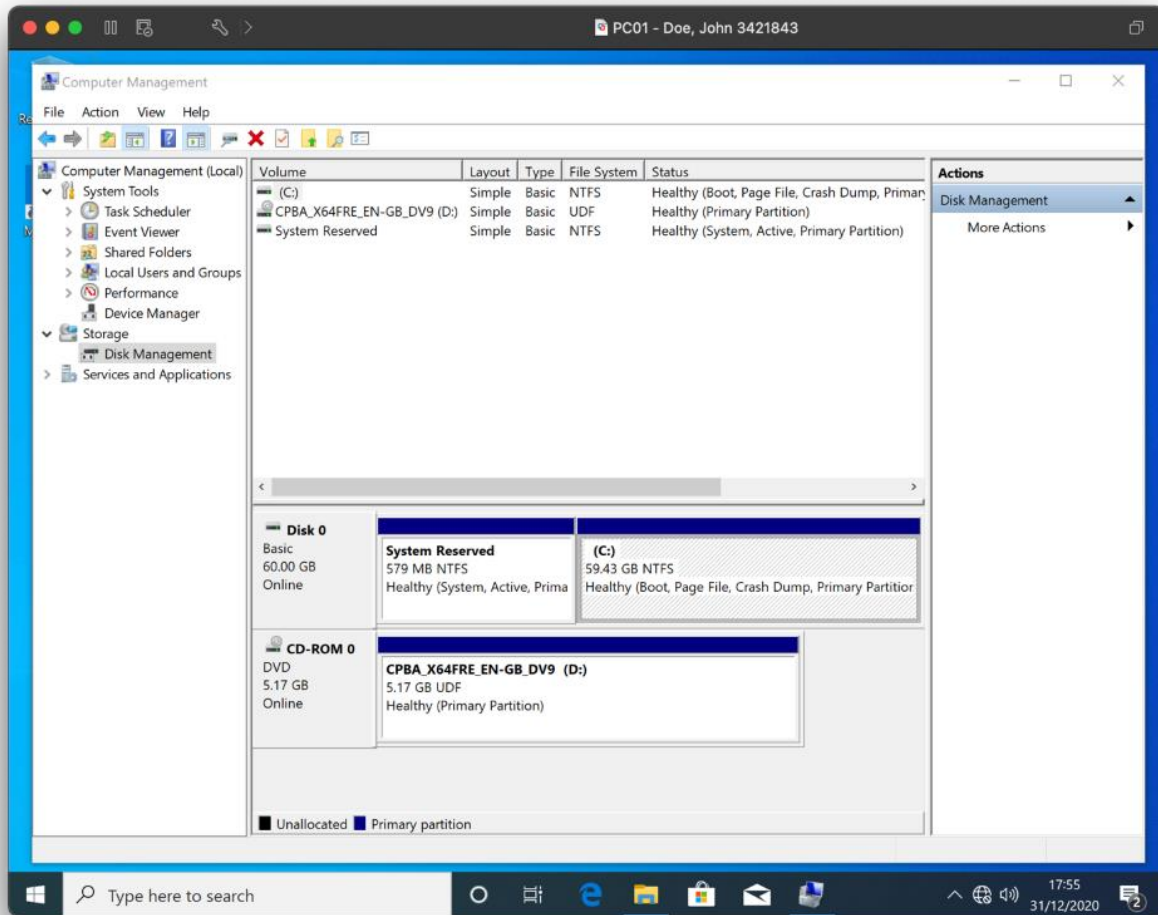

PC01 installation and configuration

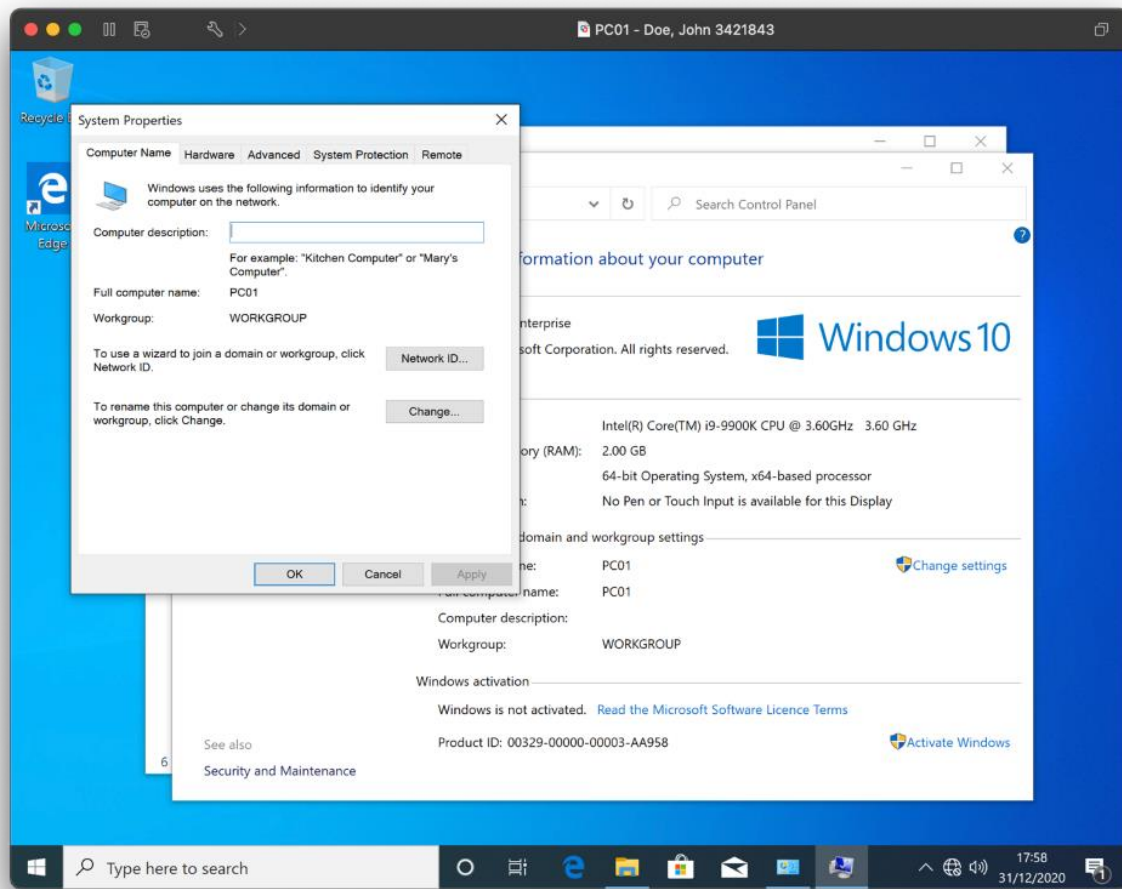

This demonstrates that I have installed the operating system (Windows 10)

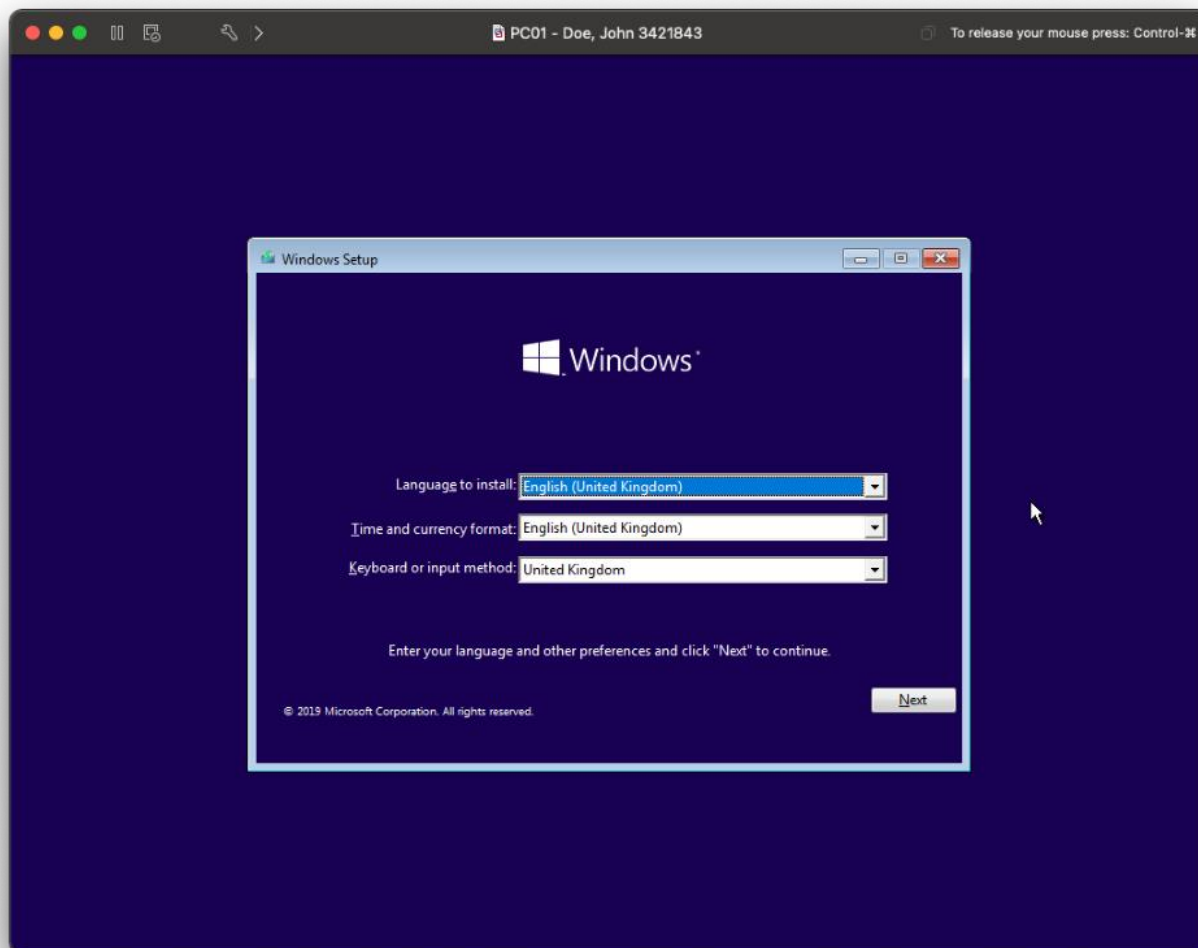

- disk partitions

- machine named correctly

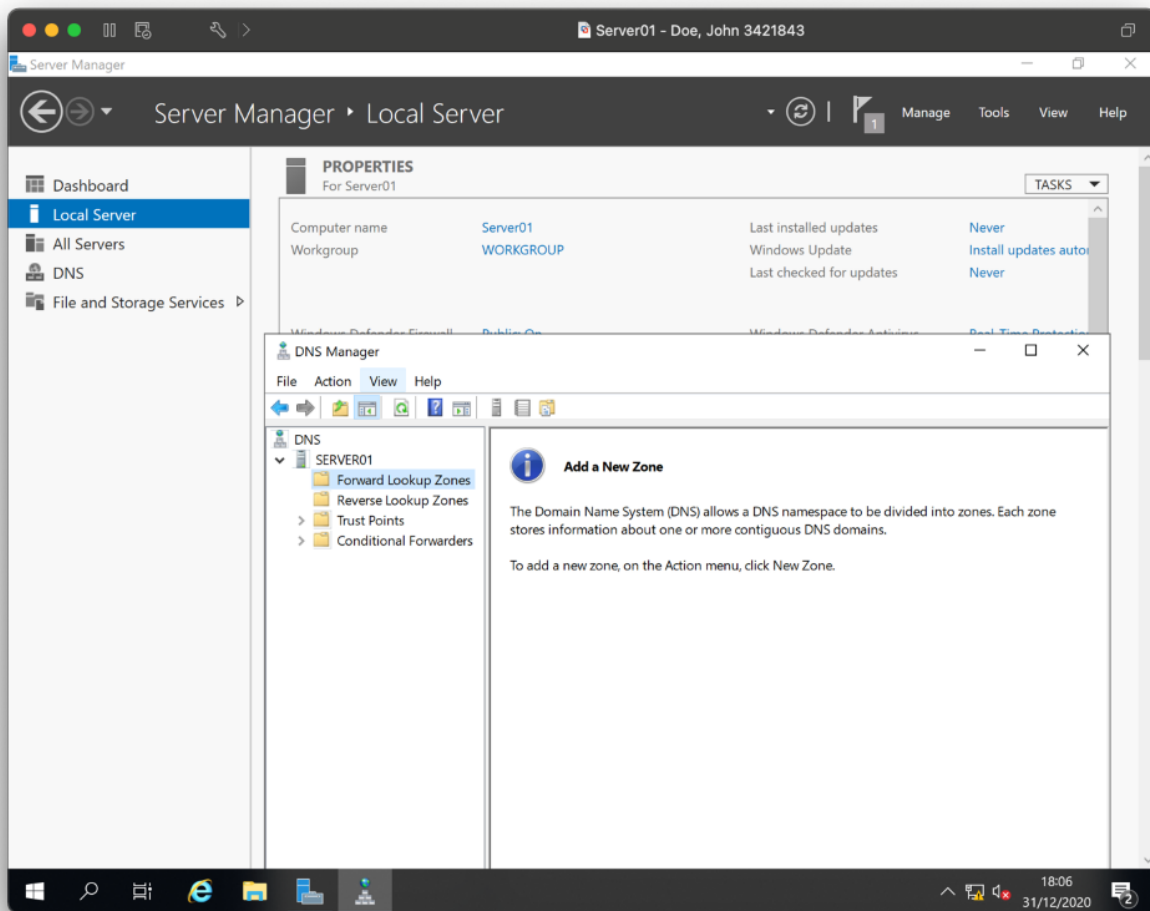

- suitable region and language settings

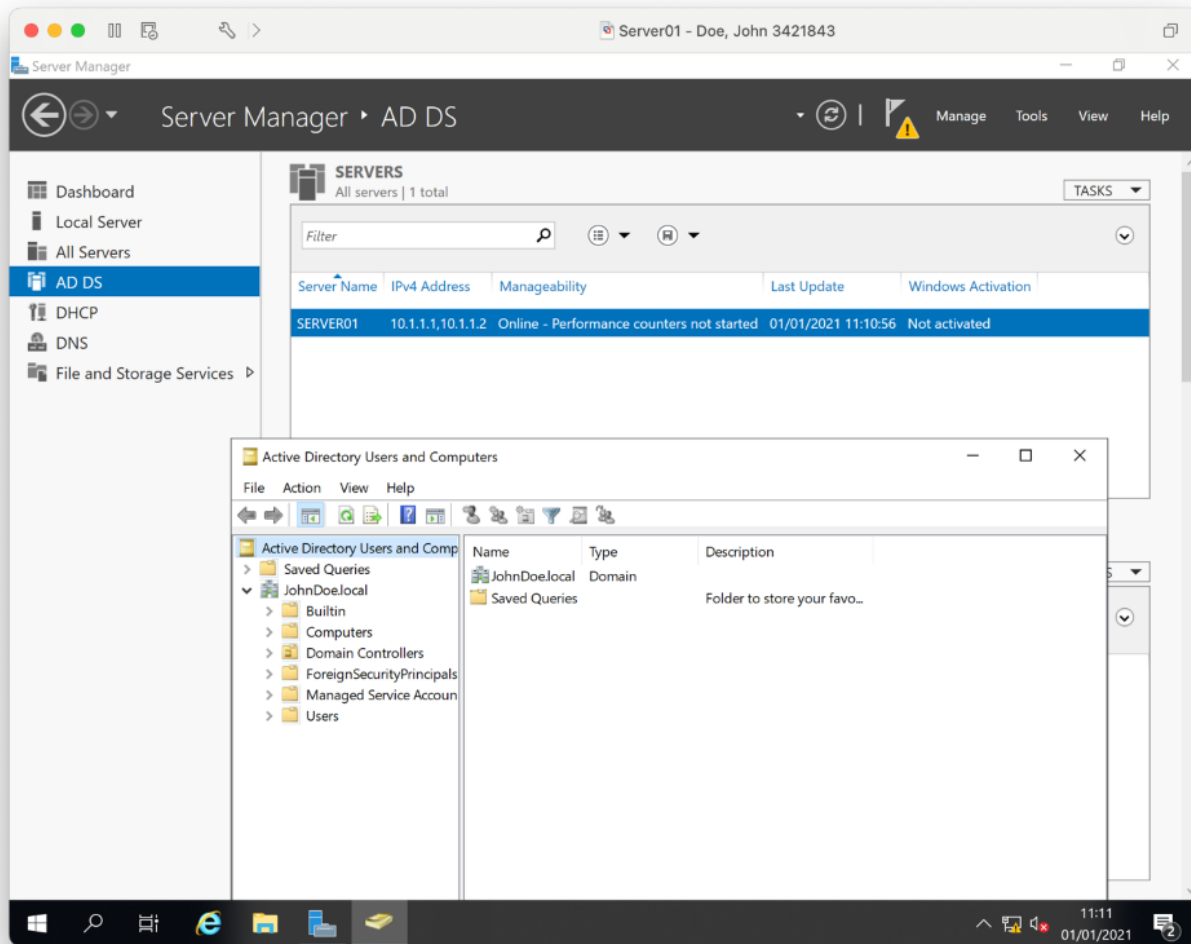

Step B

I have configured the **DNS** so that I can access websites.

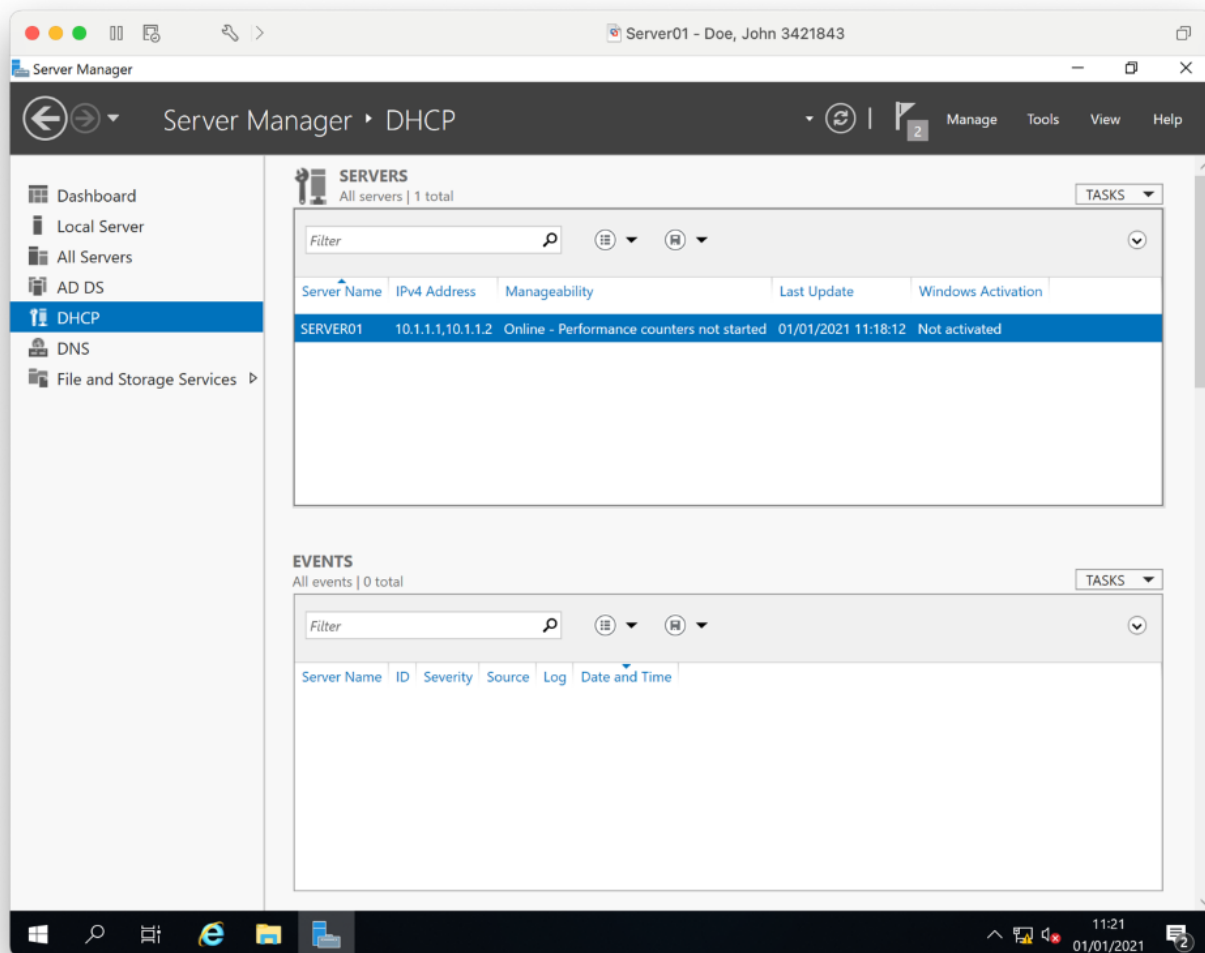

Directory service

I have configured the Active Directory service so I can configure users.

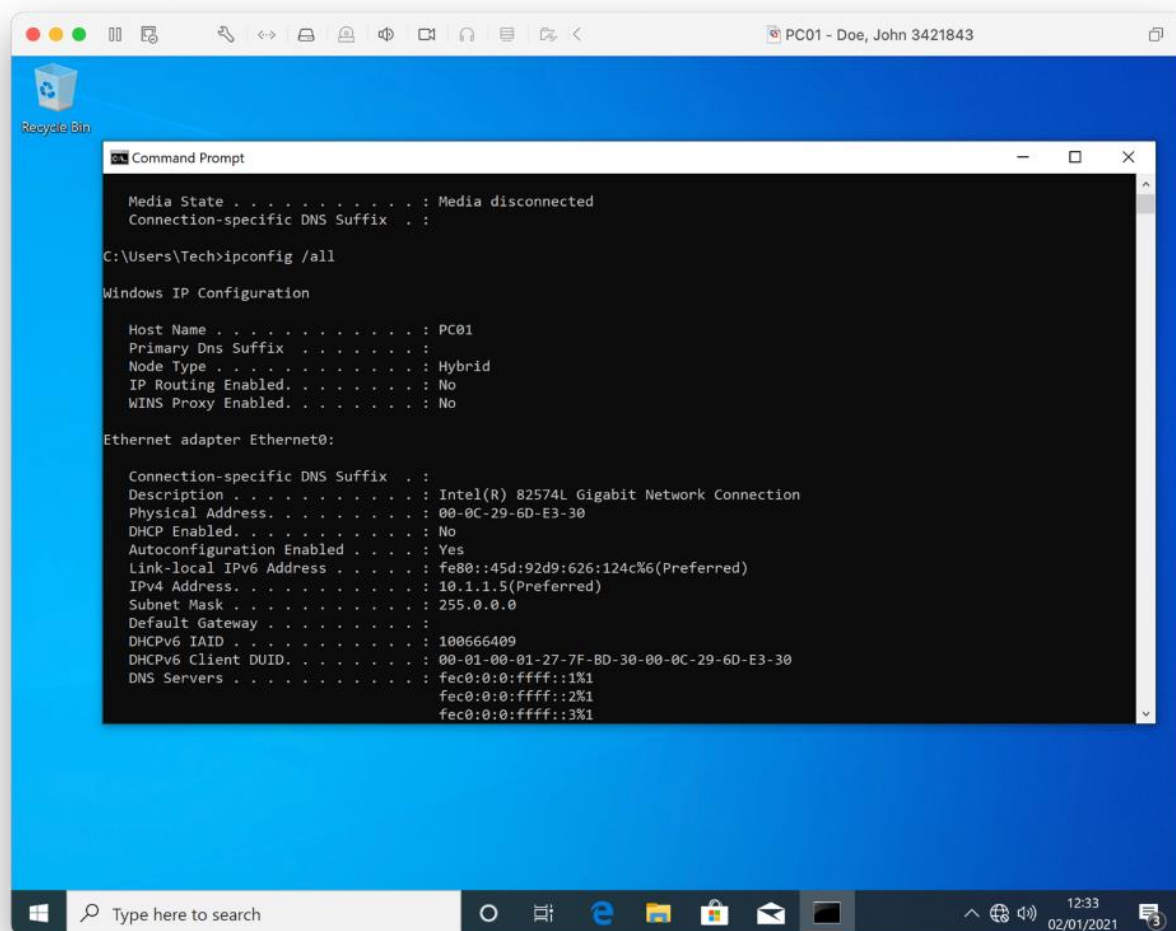

DHCP

- DHCP service installed
- I configured the DHCP service

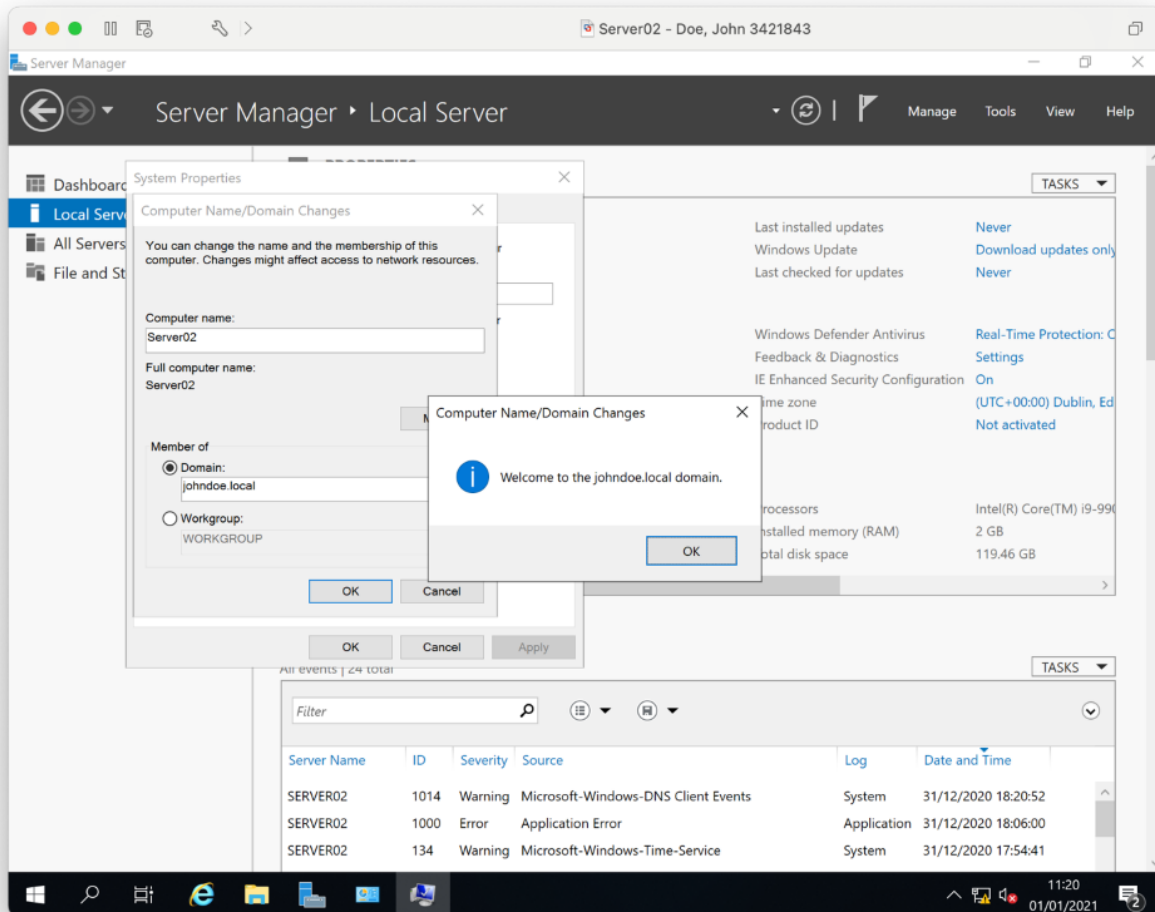

PC01 has been assigned a DHCP address using IPCONFIG /ALL

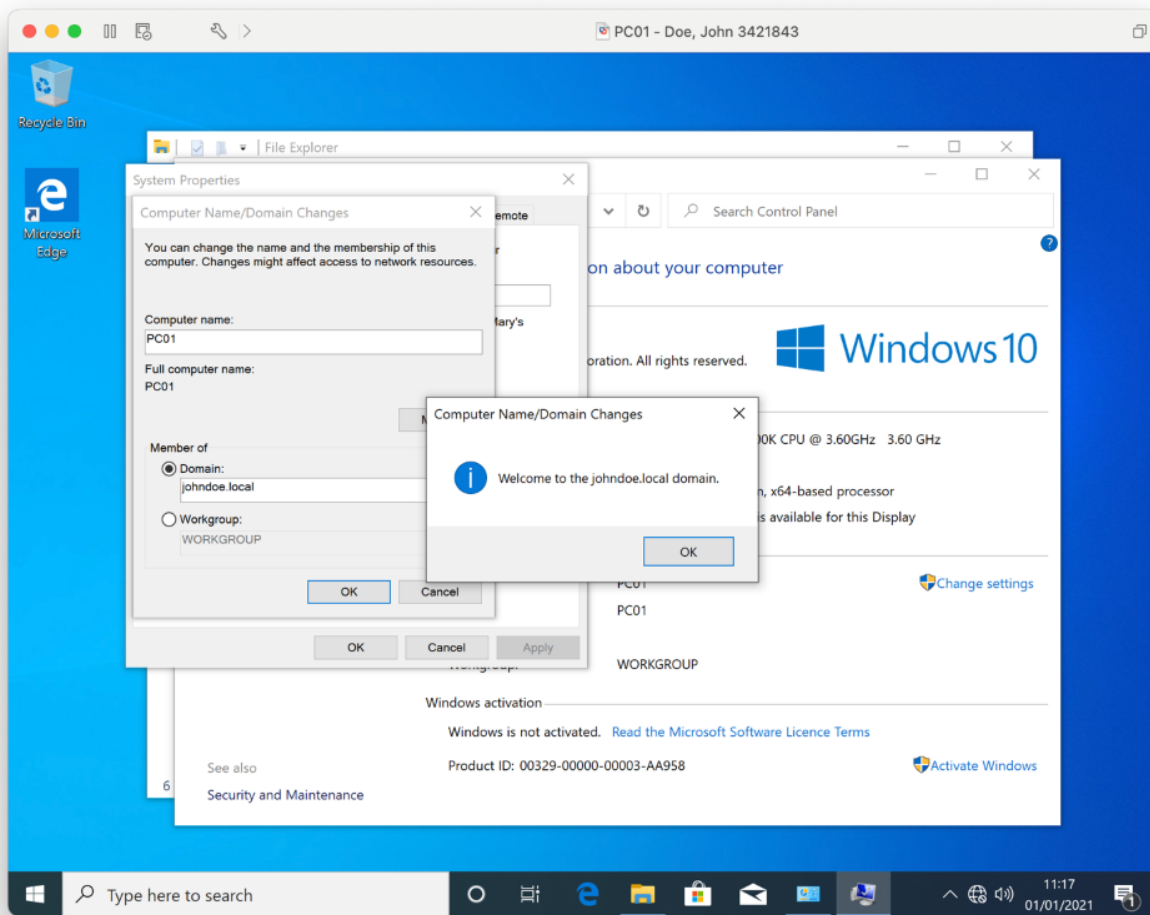

Domain joins

Server02 domain joined to (FirstnameSurname).local

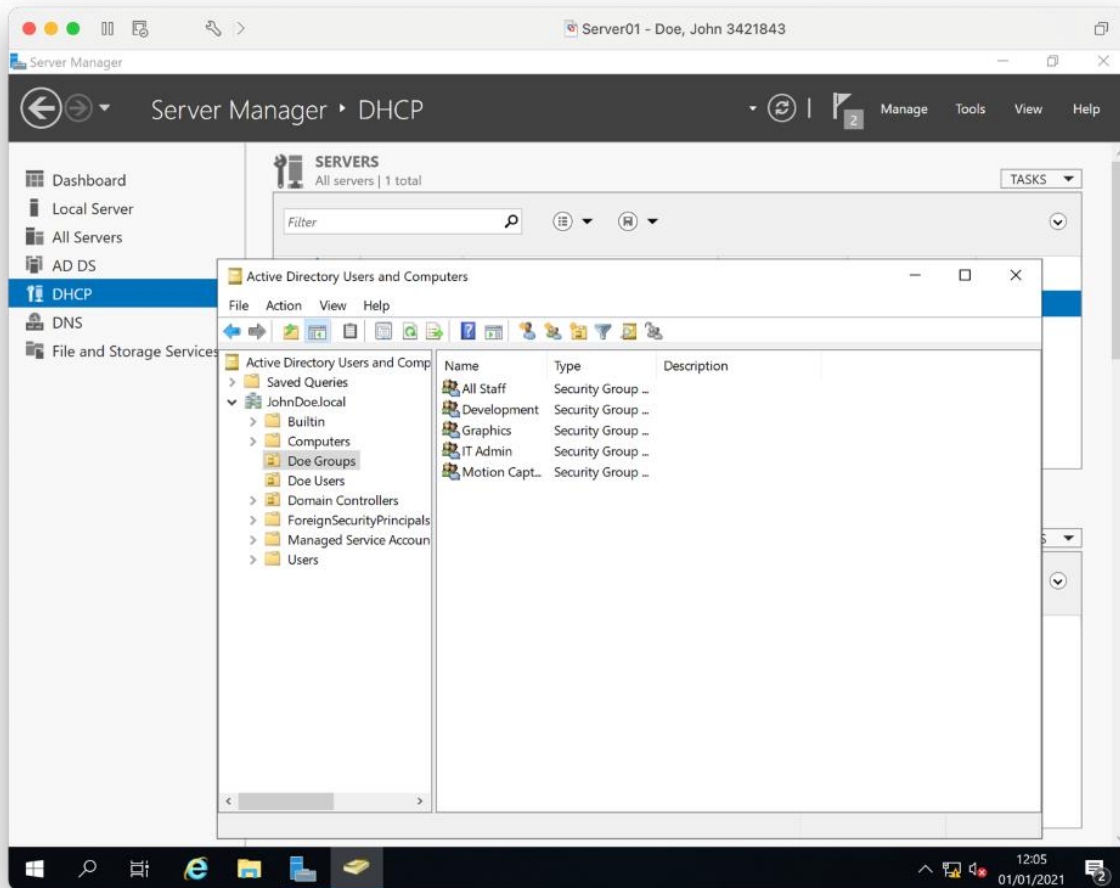

PC01 domain joined at logon to (FirstnameSurname).local

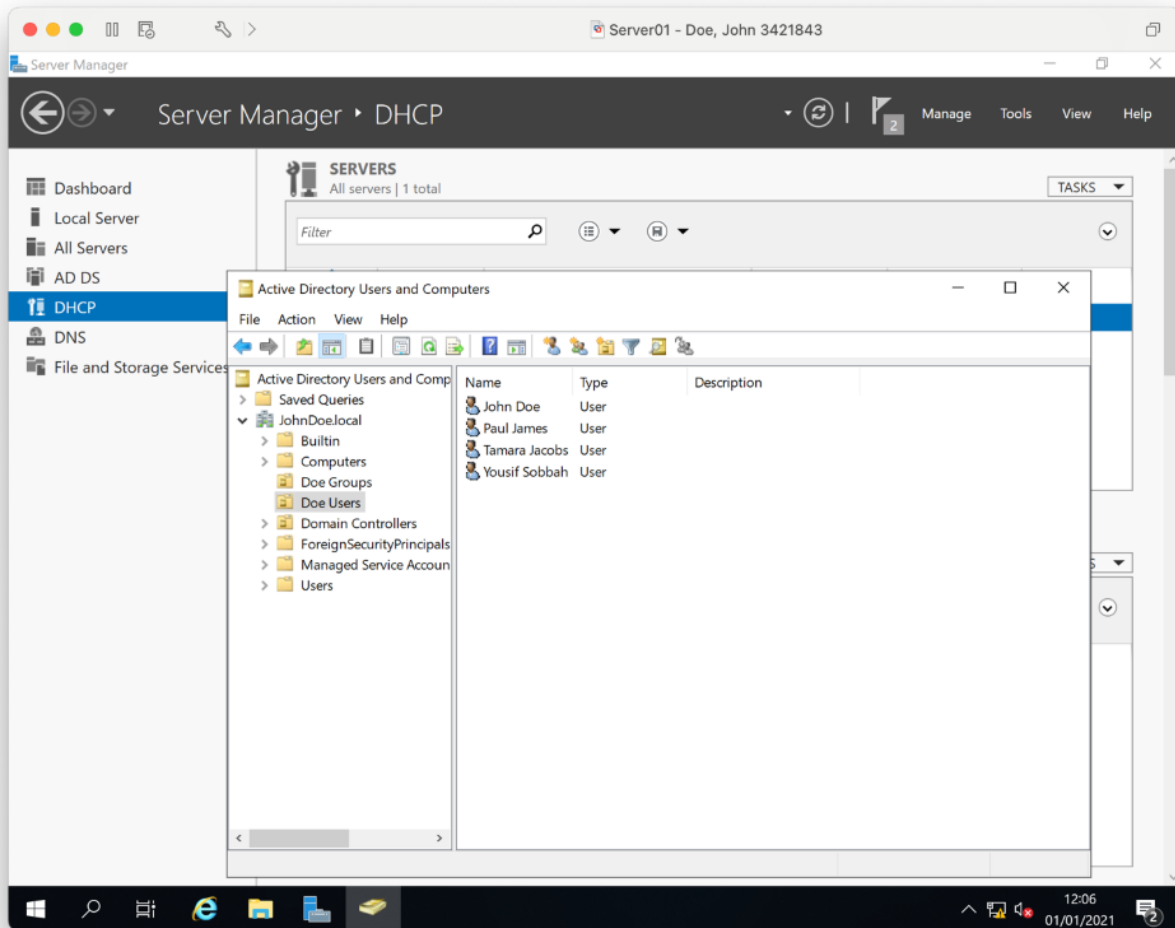

Reverse lookup

Step C Group creation

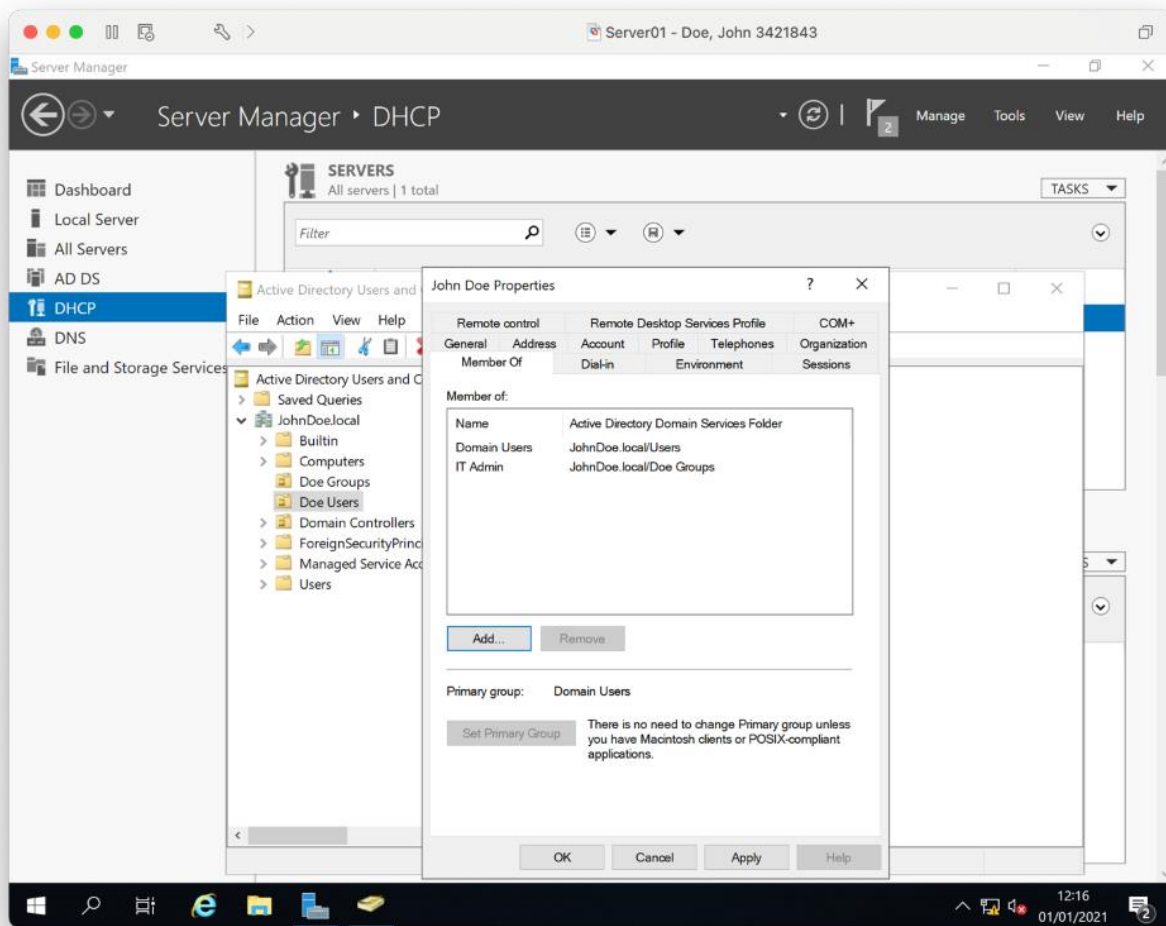

User creation

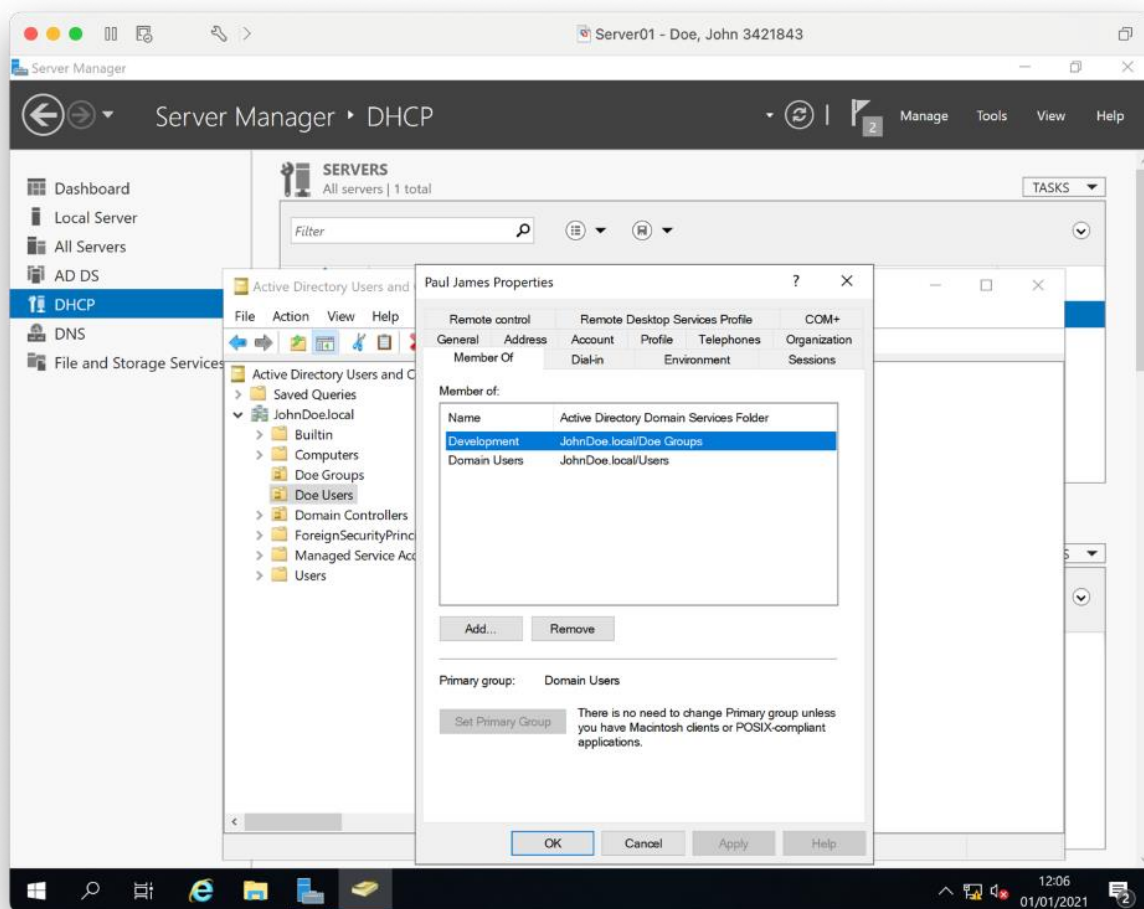

Users -Your first and surname, Paul James, Tamara Jacob and Yousif Sobbah has been created

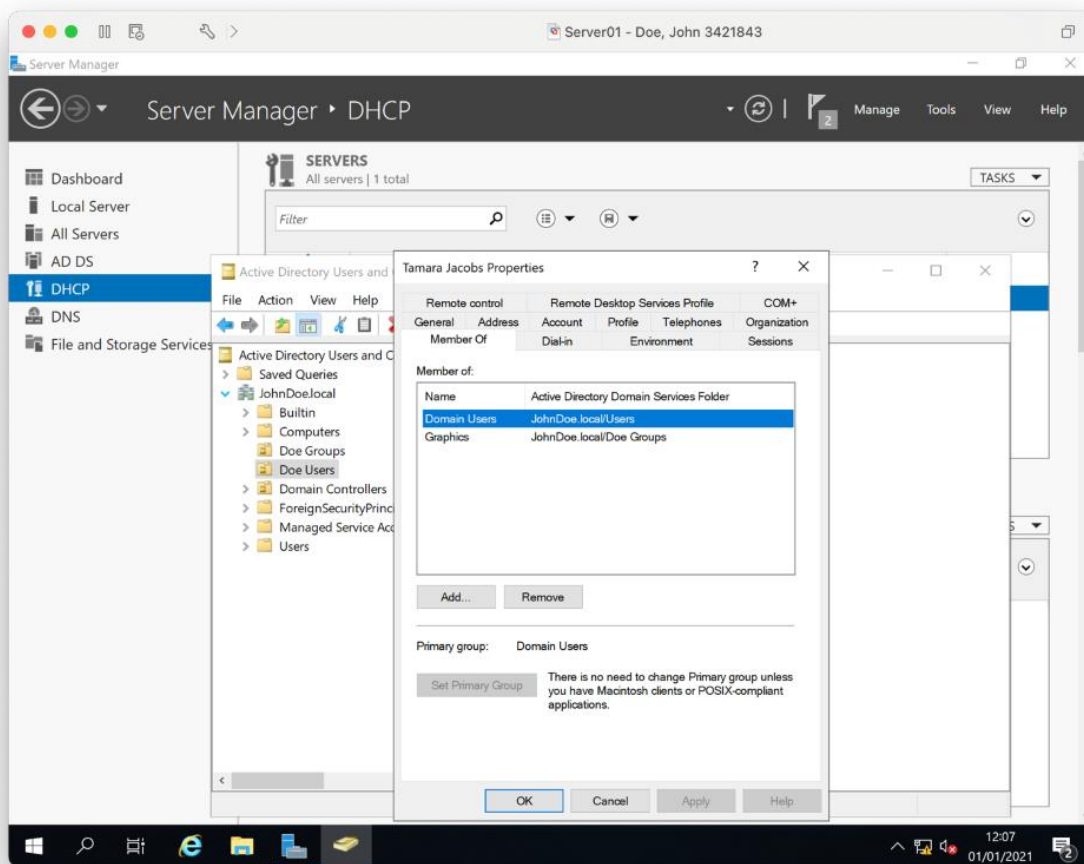

Your first and surname is now a member of the group IT admin

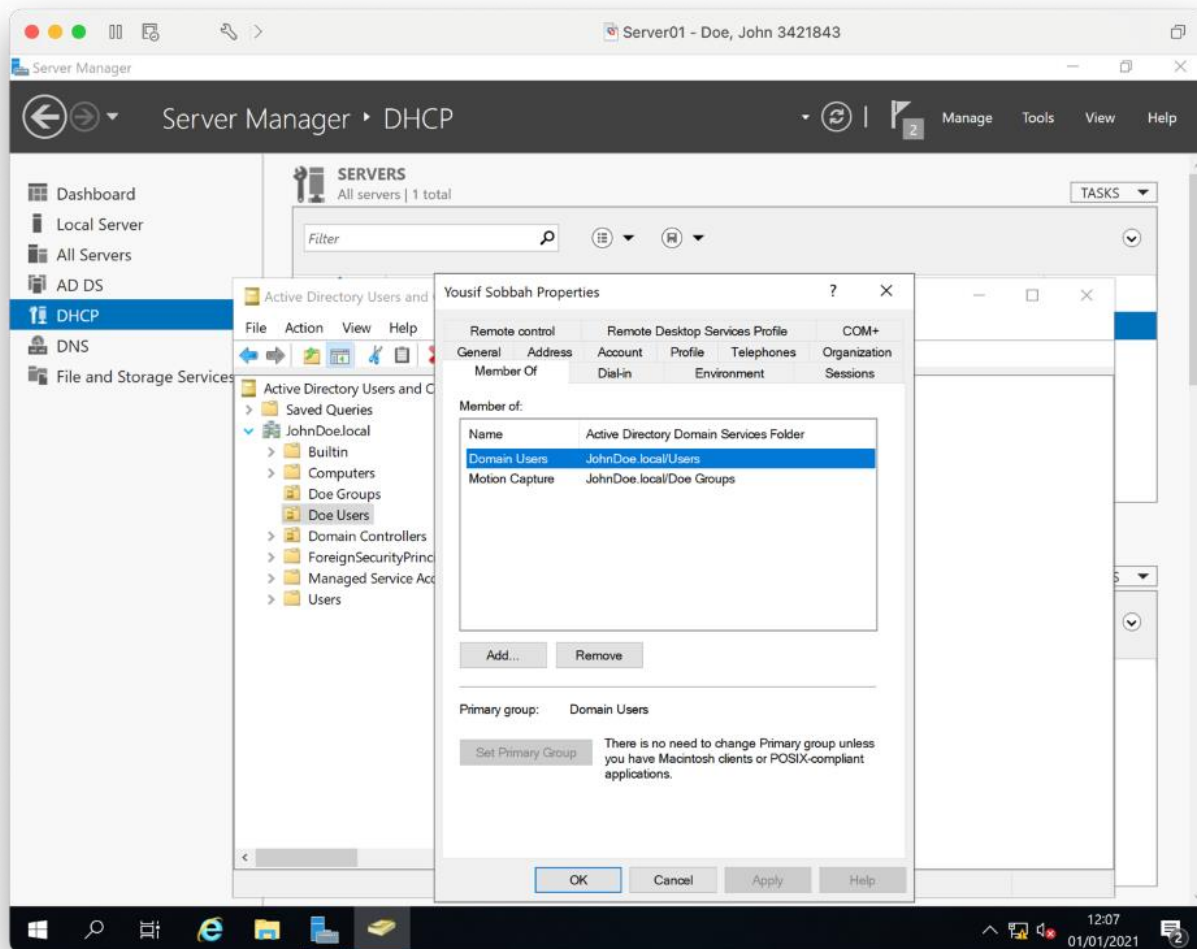

Paul James is now a member of the group Development

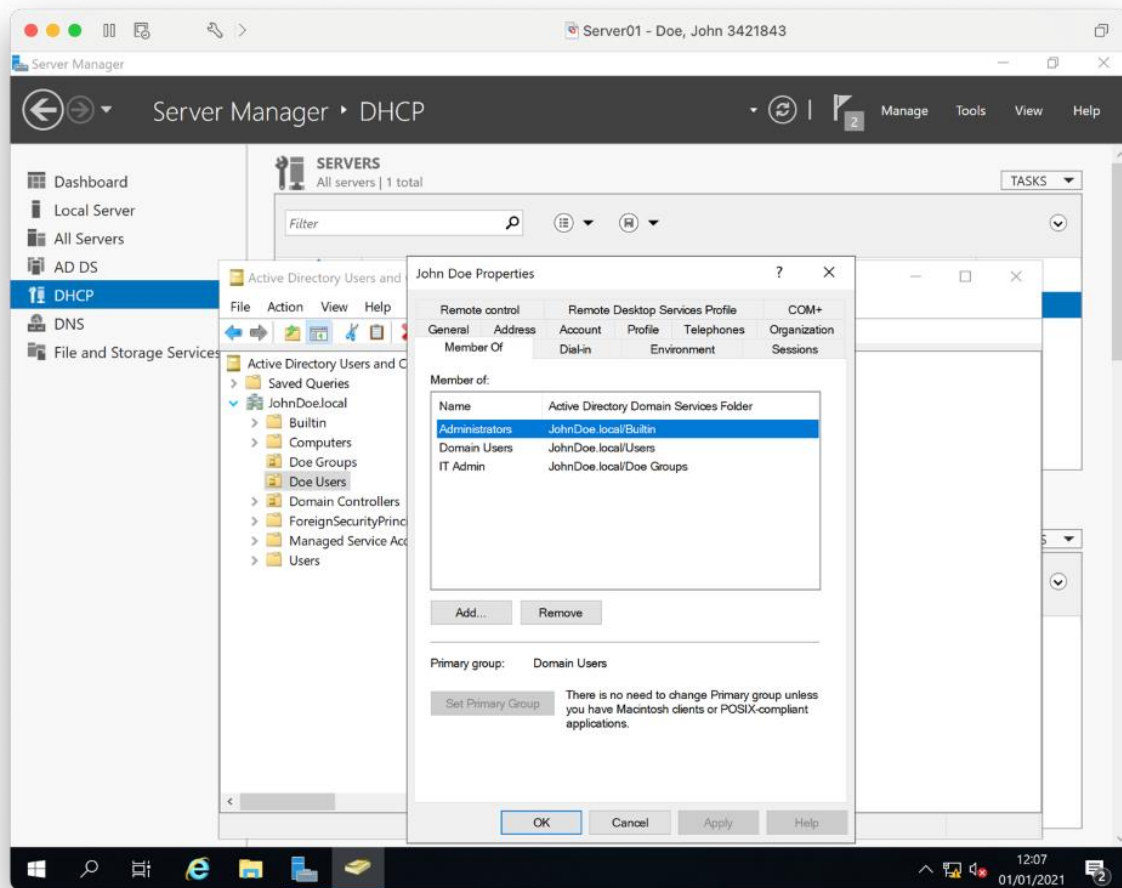

Tamara Jacobs is now a member of the group Graphics

Yousif Sobbah is now a member of the group Motion Capture

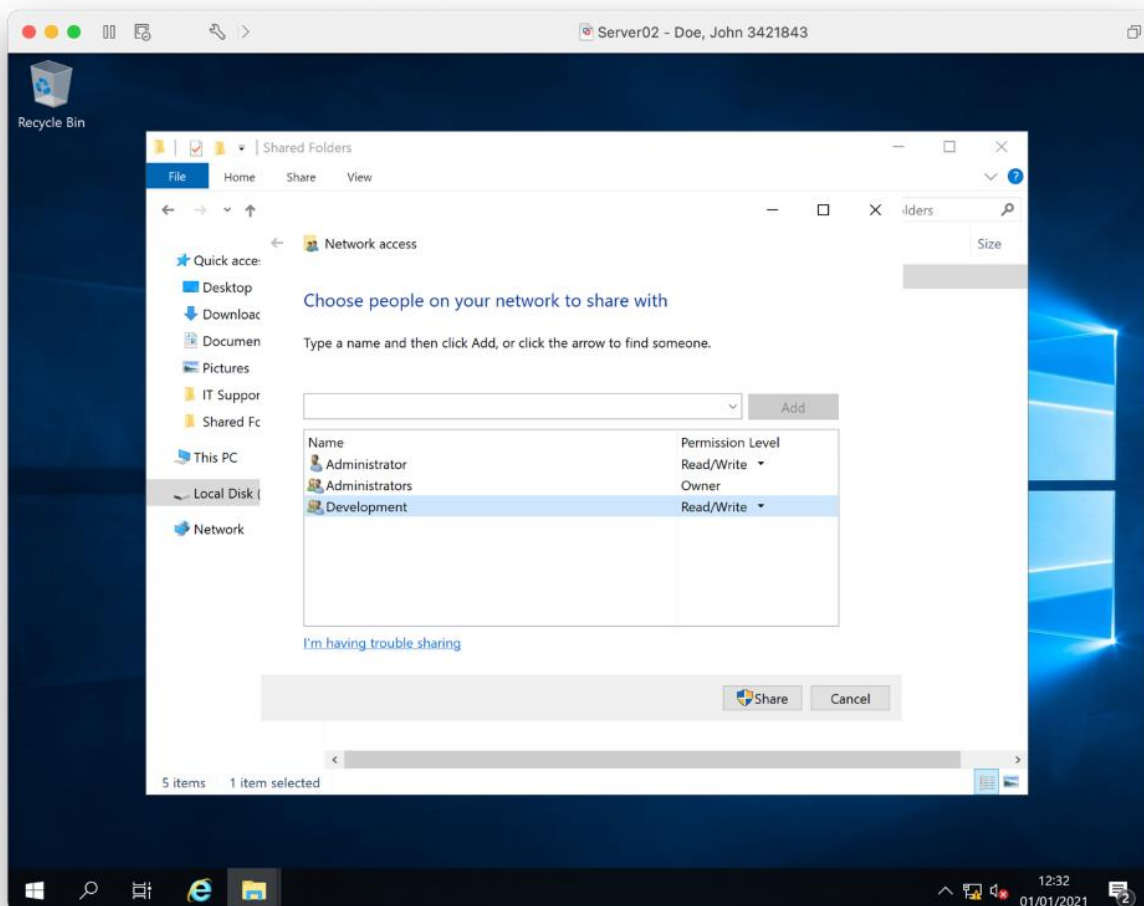

Your first and surname has been made an administrator

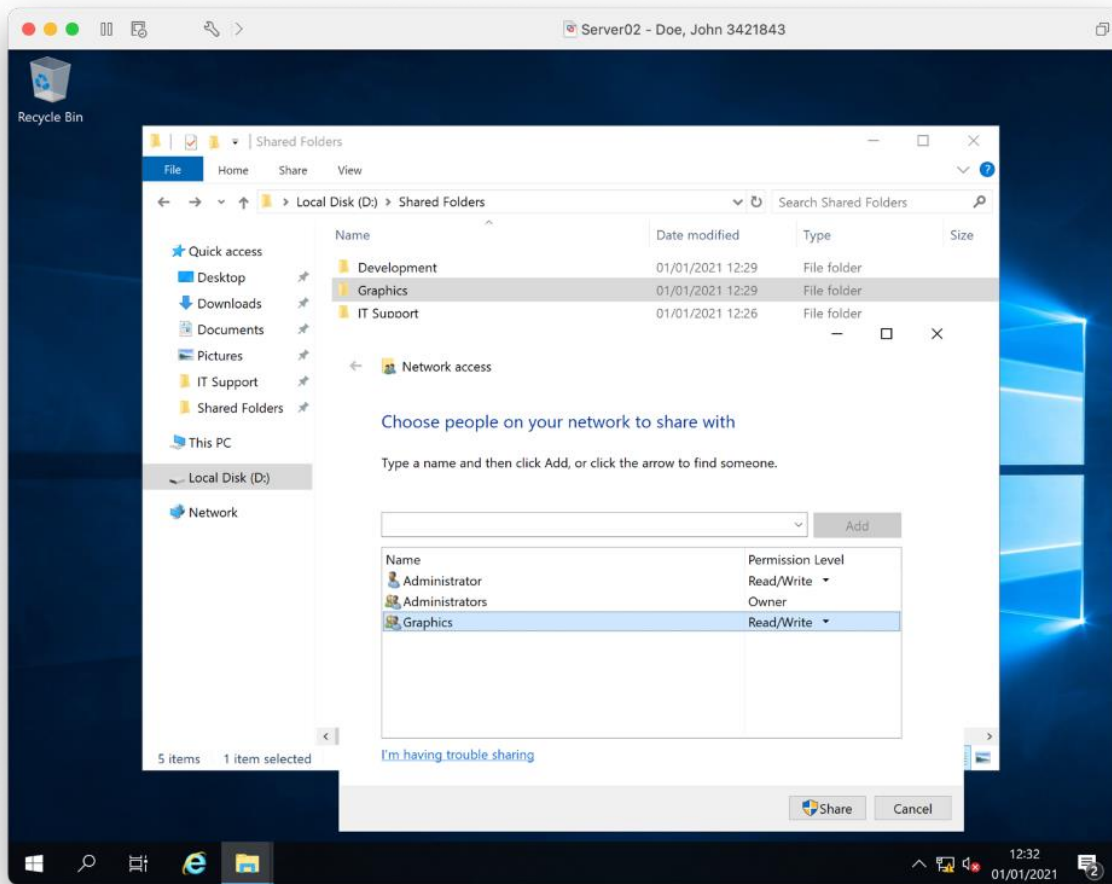

Staff added to groups

Folder permissions

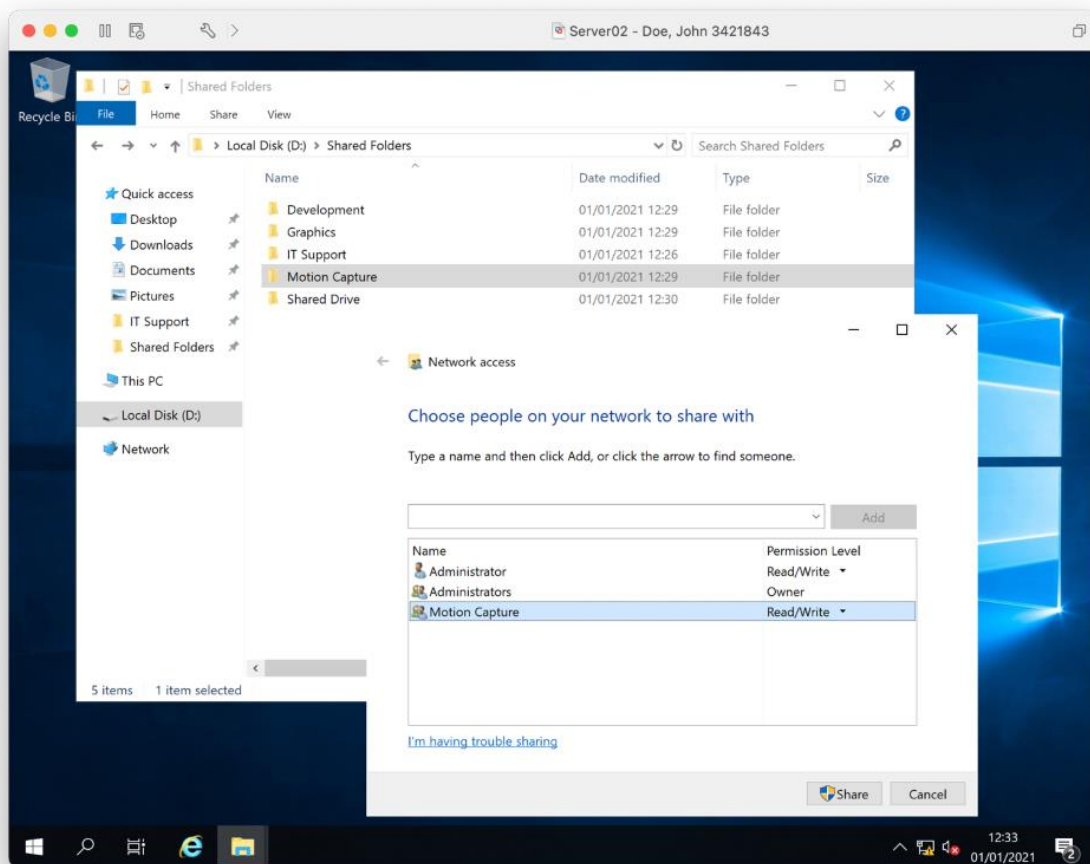

Development folder has the group Development added with read and write permission

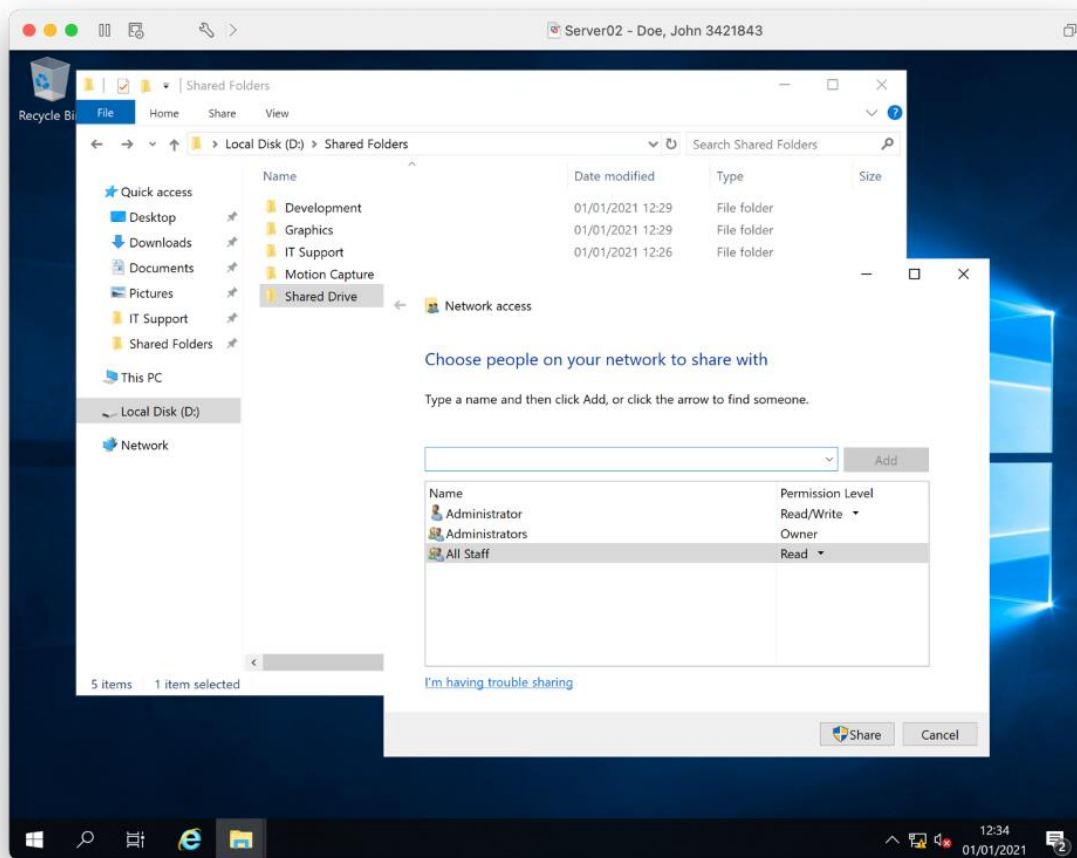

Graphics has the group Graphics added with read and write permission

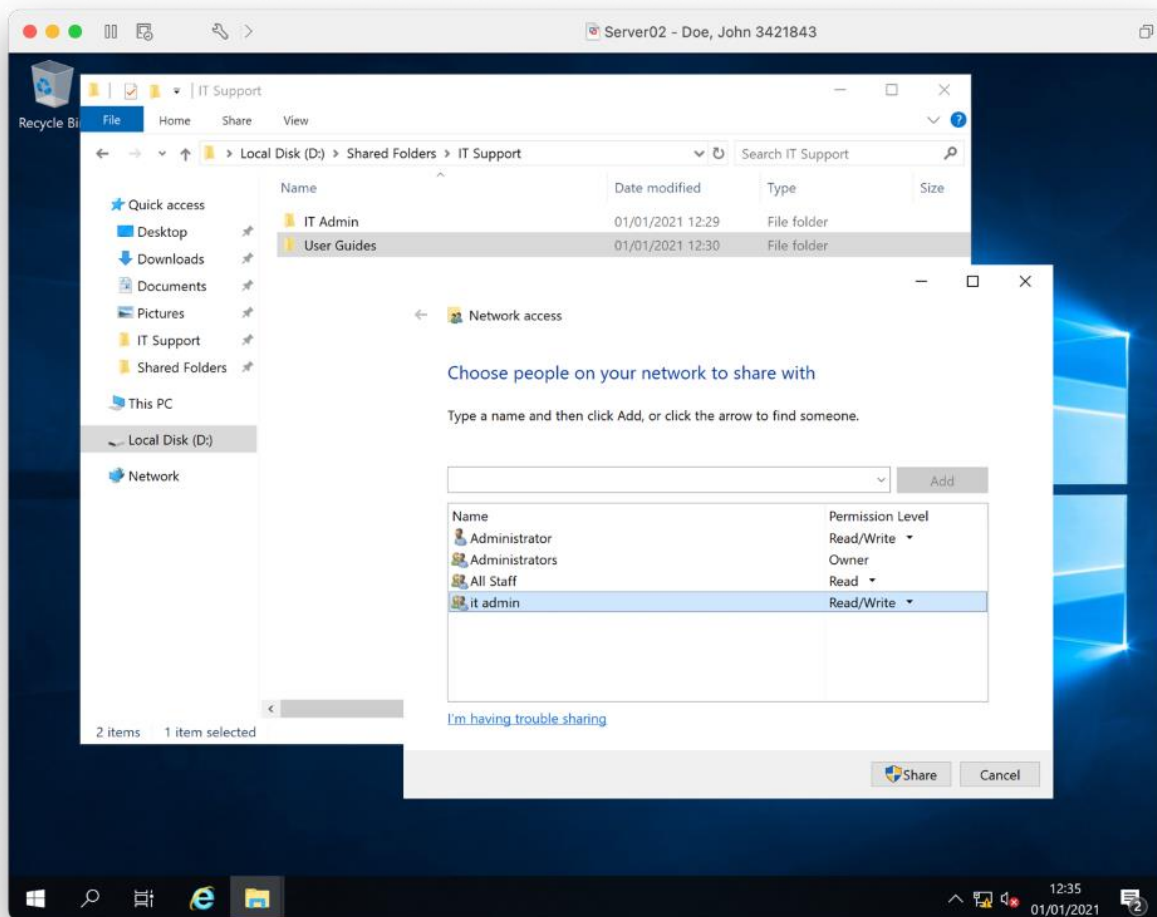

Motion capture has the group Motion Capture added with read and write permission

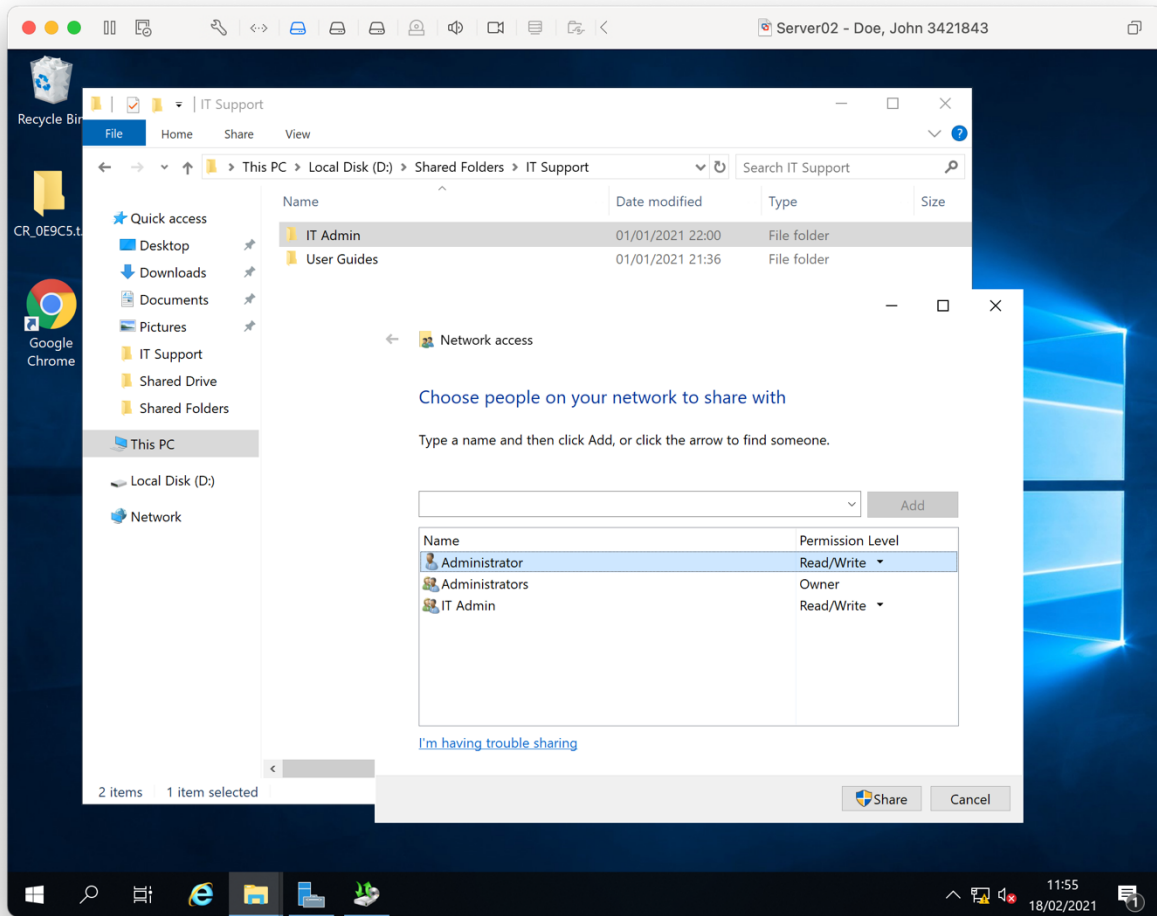

Shared drive has the group All Staff added with read permission

User guides has the group all staff added with read permission and IT admin added with read and write permission

IT admin has the group IT admin added with read and write permission for IT admin

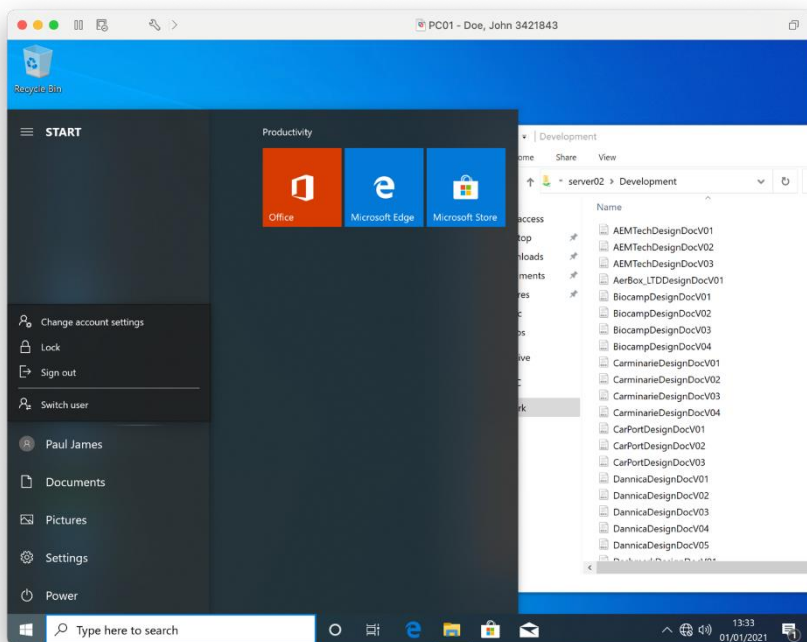

Folder testing

Add more rows to the table as required

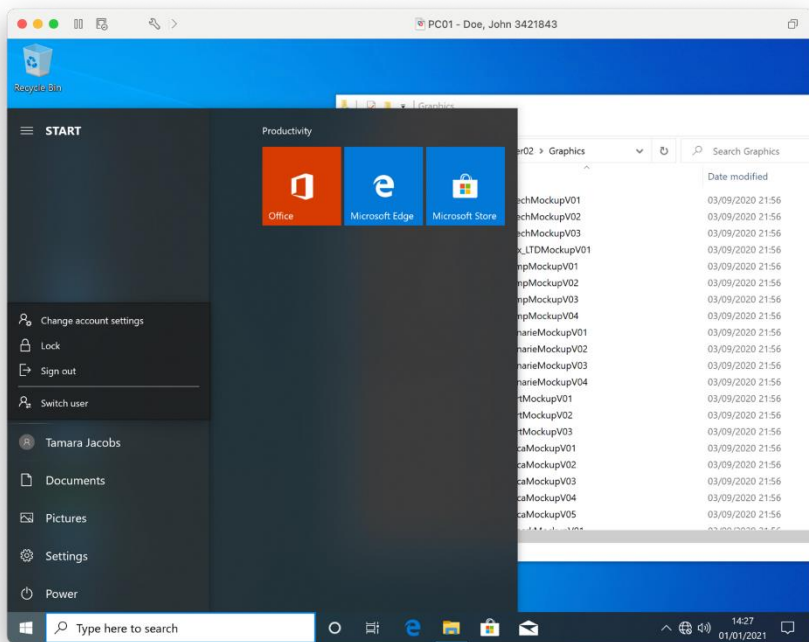

Test ID	Folder being tested	User account (Test data)	Test description and expected outcome	Actual outcome
1	Development	Paul James	Testing that a valid member of the development group as read access	The user was able to read files stored in the folder
2	Graphics	Tamara Jacobs	Testing that a valid member of the graphics group as read access	The user was able to read files stored in the folder
3	Motion capture	Yousif Sobbah	Testing that a valid member of the motion capture group as read access	The user was able to read files stored in the folder
4	Shared drive	Tamara Jacobs	Testing that a valid member of the all staff group as read access	The user was able to read files stored in the folder
5	User guides	Tamara Jacobs	Testing that a valid member of the all staff group as read access	The user was able to read files stored in the folder

6	User guides	Your first and Surname	Testing that a valid member of the IT admin group as read access	The user was able to read files stored in the folder
7	IT admin	Your first and Surname	Testing that a valid member of the IT admin group as read access	The user was able to read files stored in the folder
8	Development	Paul James	Testing that a valid member of the development group has read and write access	The user was able to write to files stored in the folder
9	Graphics	Tamara Jacobs	Testing that a valid member of the graphics has read and write access	The user was able to write to files stored in the folder
10	Motion capture	Yousif Sobbah	Testing that a valid member of the motion capture group as read and write access	The user was able to write to files stored in the folder
11	User guides	Your first and surname	Testing that a valid member of the IT admin group as read and write access	The user was able to write to files stored in the folder
12	IT admin	Your first and surname	Testing that a valid member of the IT admin group as read and write access	The user was able to write to files stored in the folder

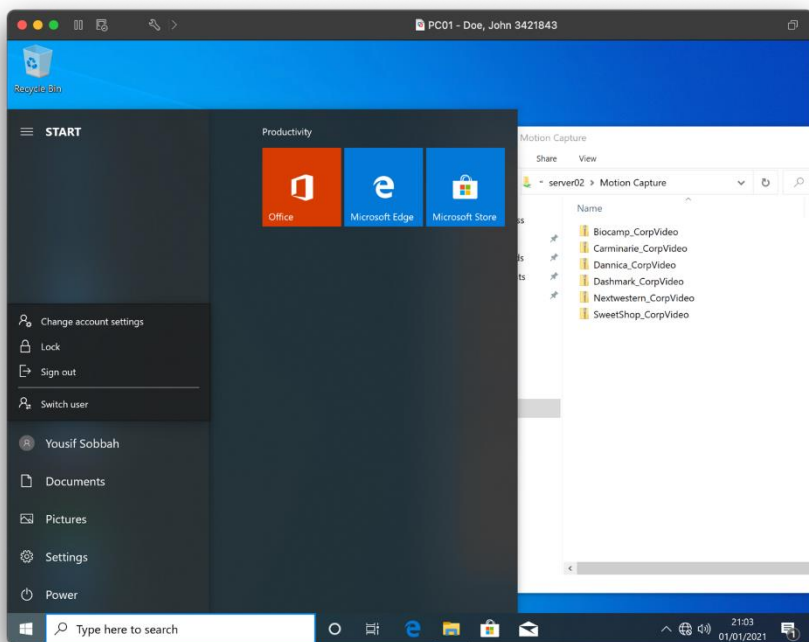

Print screen showing the result of test number 1, showing the folder opens correctly

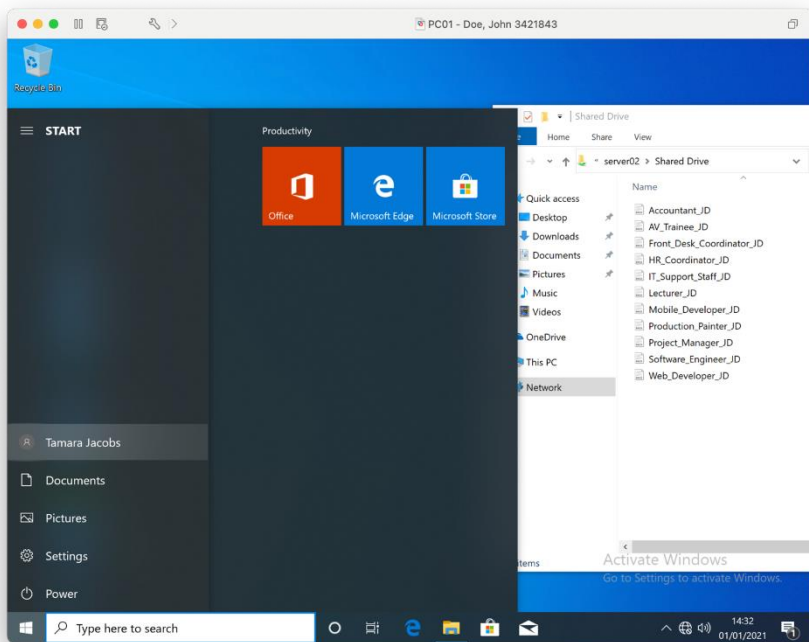

Print screen showing the result of test number 2, showing the folder opens correctly

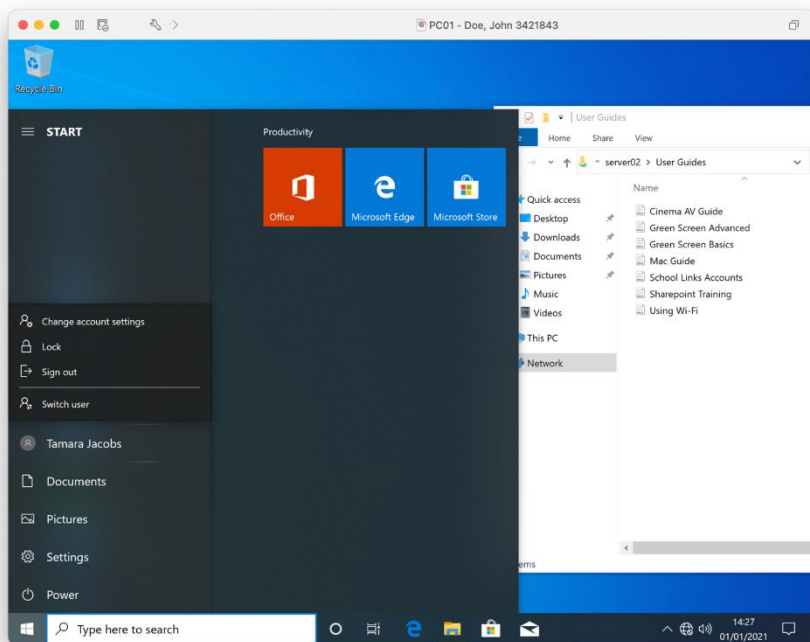

Print screen showing the result of test number 3, showing the folder opens correctly

Print screen showing the result of test number 4, showing the folder opens correctly

Print screen showing the result of test number 5, showing the folder opens correctly

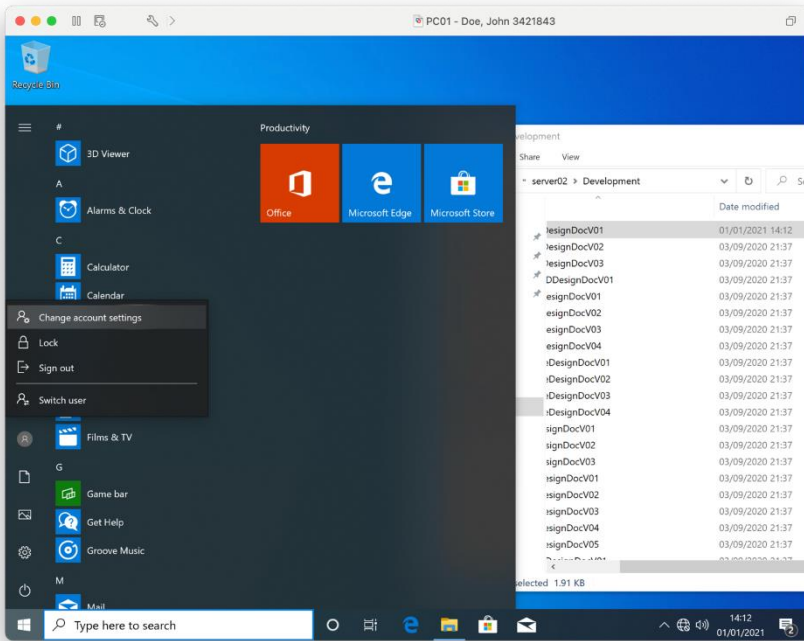

Print screen showing the result of test number 6, showing the folder opens correctly

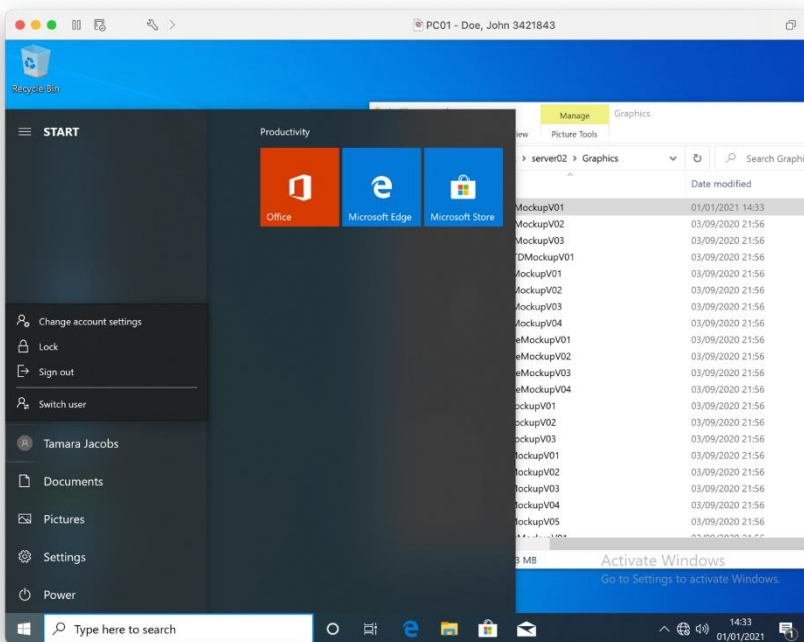

Print screen showing the result of test number 7, showing the folder opens correctly

Print screen showing the result of test number 8, showing the file has been opened and saved back correctly

Print screen showing the result of test number 9, showing the file has been opened and saved back correctly

Print screen showing the result of test number 10, showing the file has been opened and saved back correctly

Print screen showing the result of test number 11, showing the file has been opened and saved back correctly

Print screen showing the result of test number 12, showing file has been opened and saved back correctly

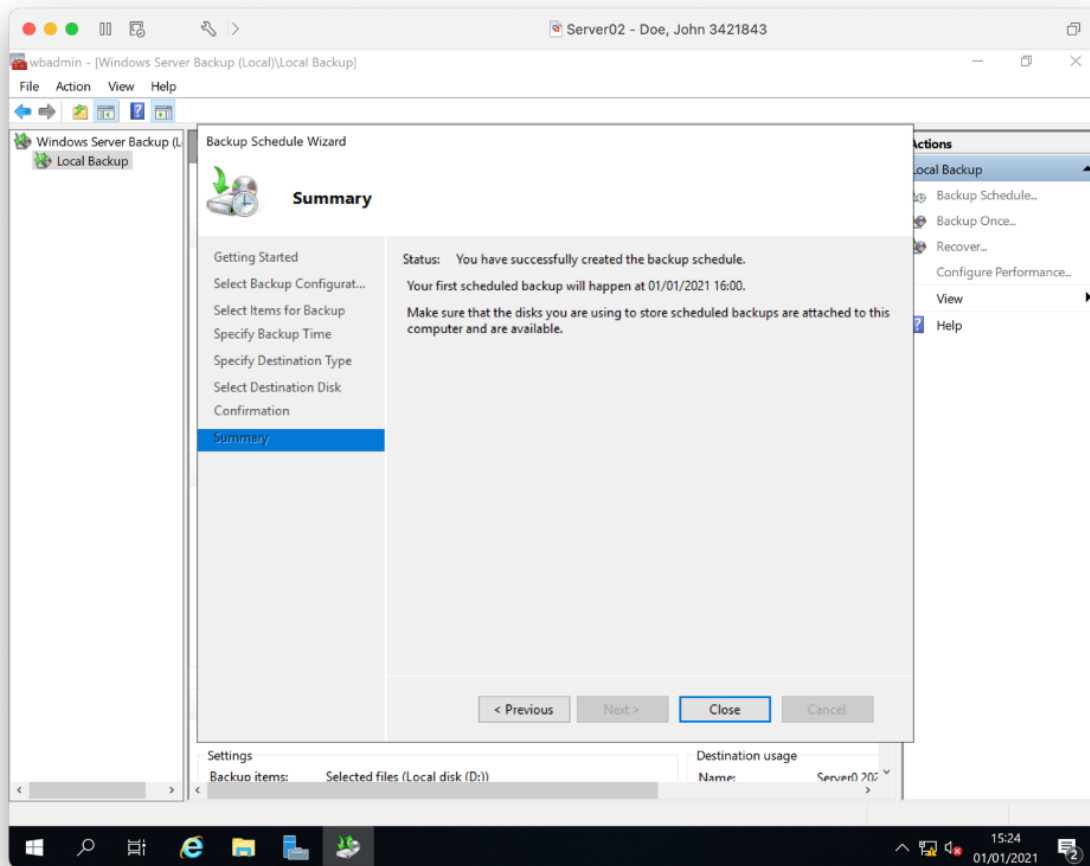

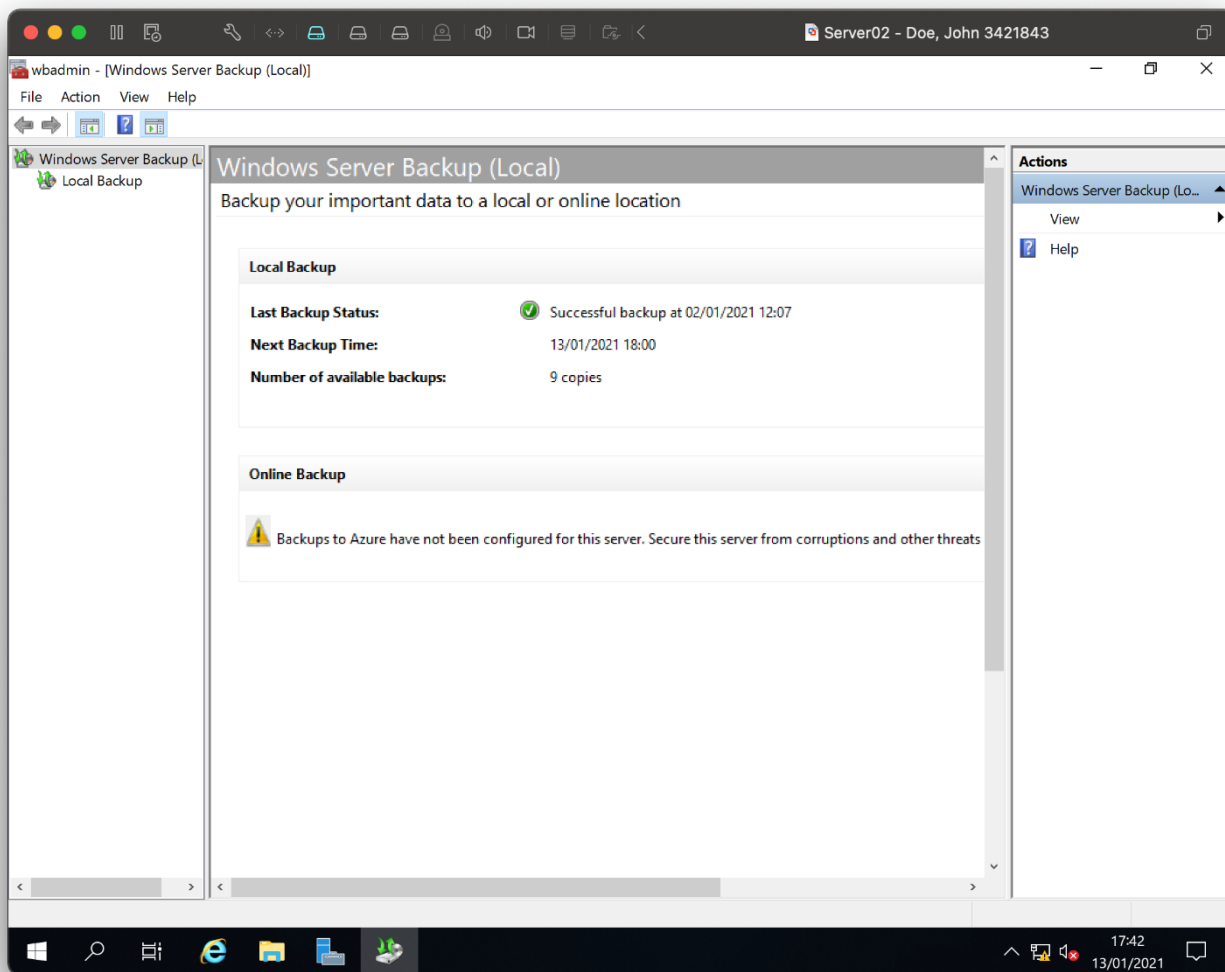

Step D

Create backup

Print screen showing the scheduled backup has been put in place from the backup manager dialogue box

Print screen showing the scheduled backup has been completed from the backup manager dialogue box

Backup restoration

Showing that the folder development has been deleted

Print screen showing the file selected in the restoration dialogue box

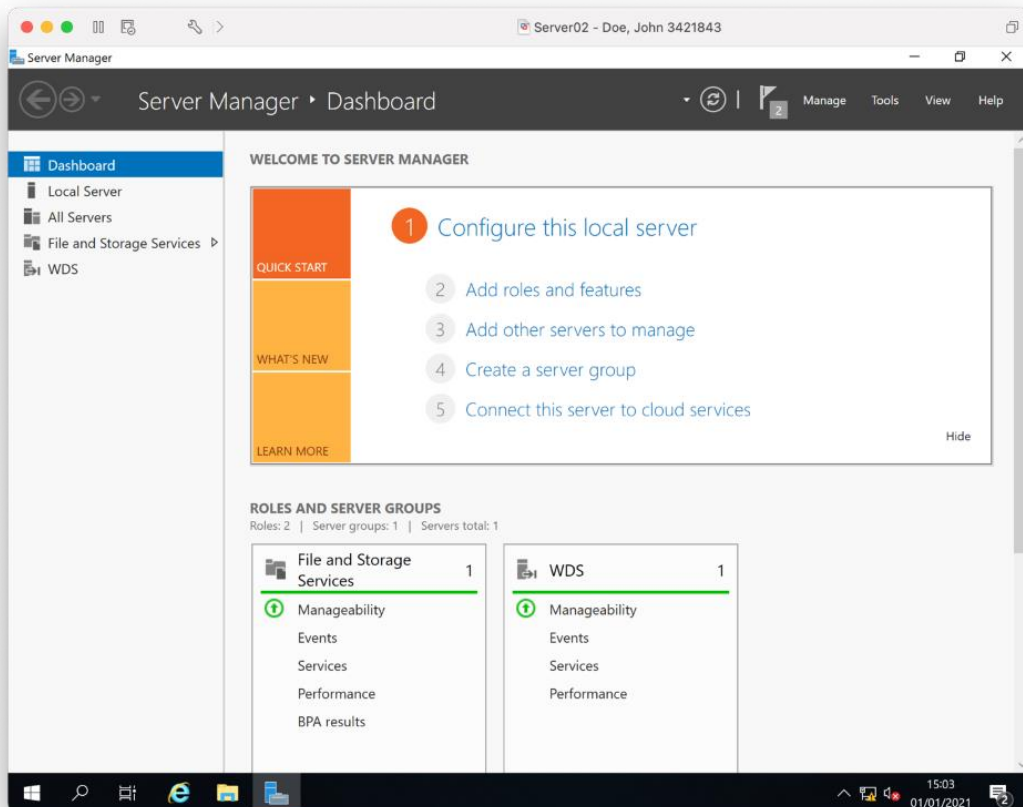

Print screen showing the successful restoration of the folder back to a suitable location

Step E

Role installation

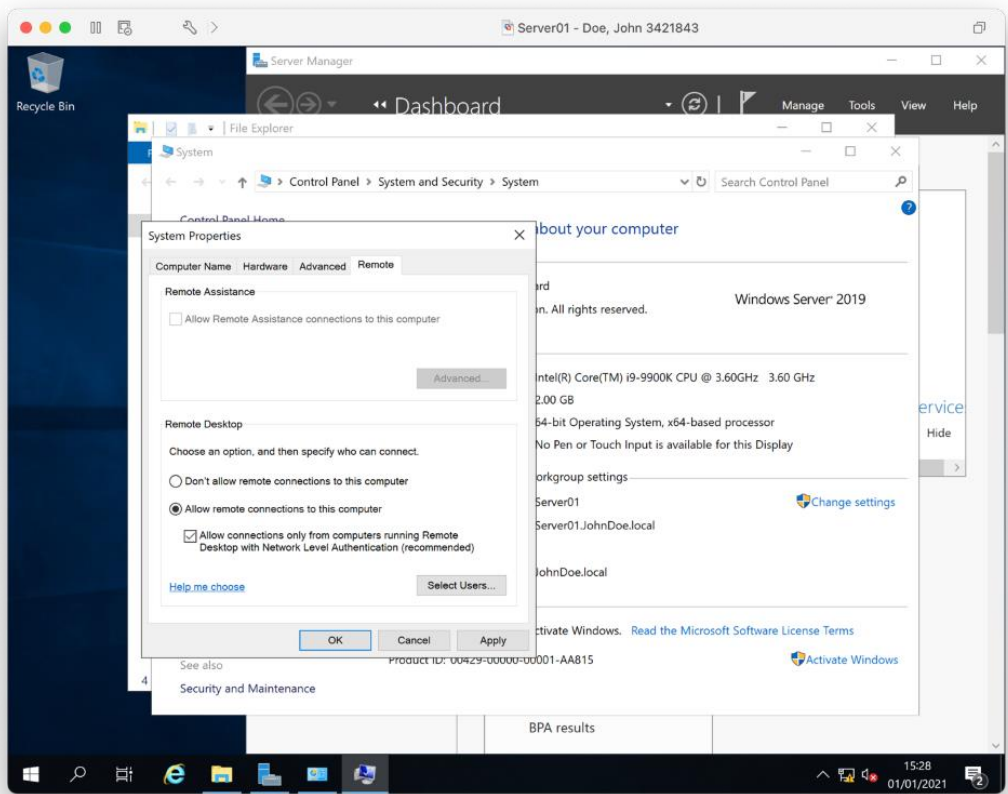

Print screen showing the Windows deployment role has been installed and shown in server manager dialogue box

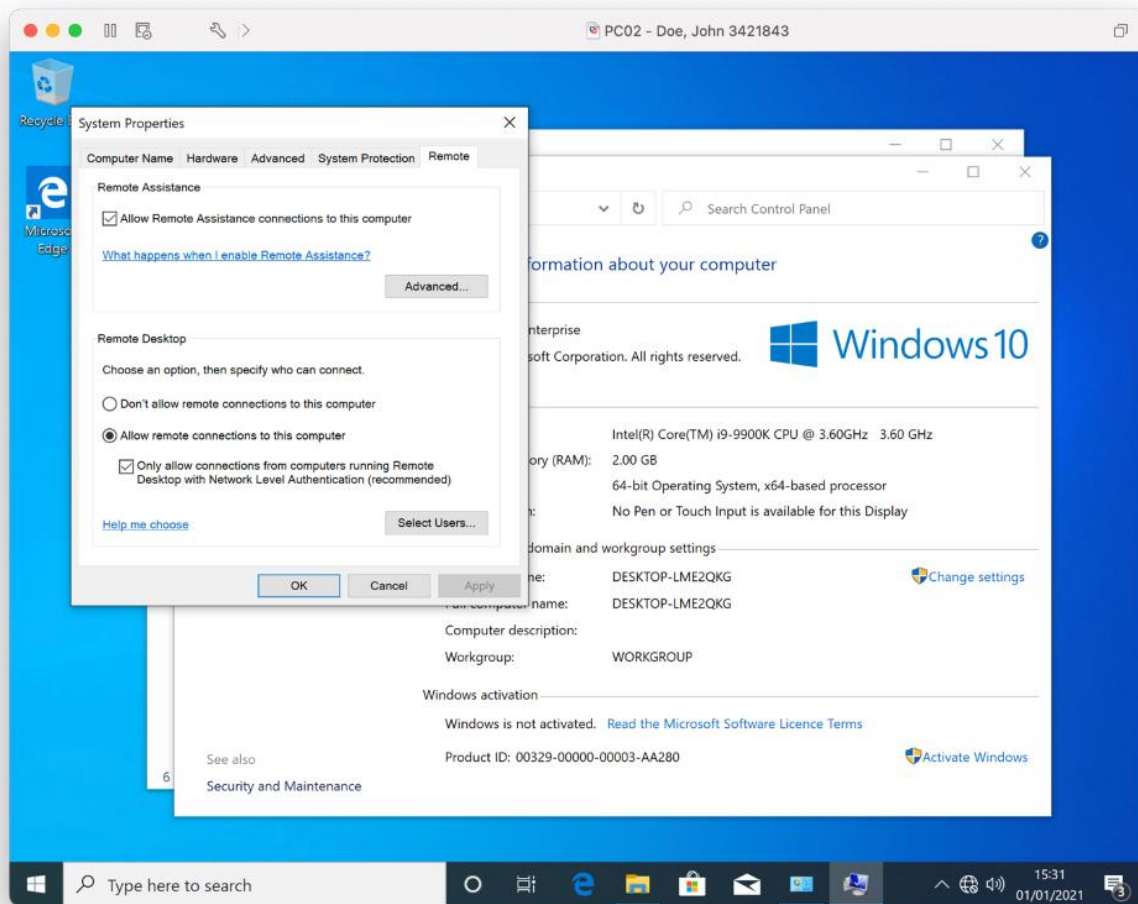

Step F

Configuration

Print screen showing the remote desktop has been enabled on the server in system properties

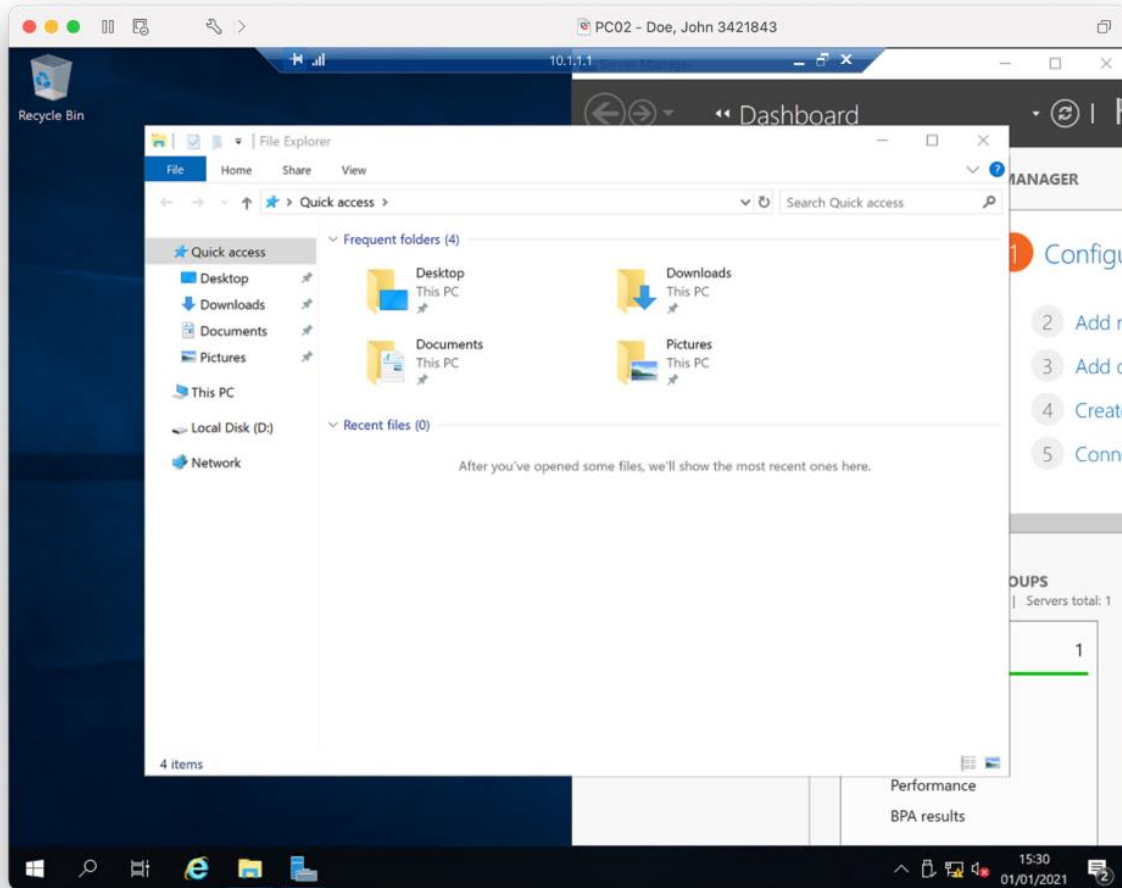

Print screen showing remote access has been enabled for PC02 in system properties

Accessing

Server in a remote desktop window being administered

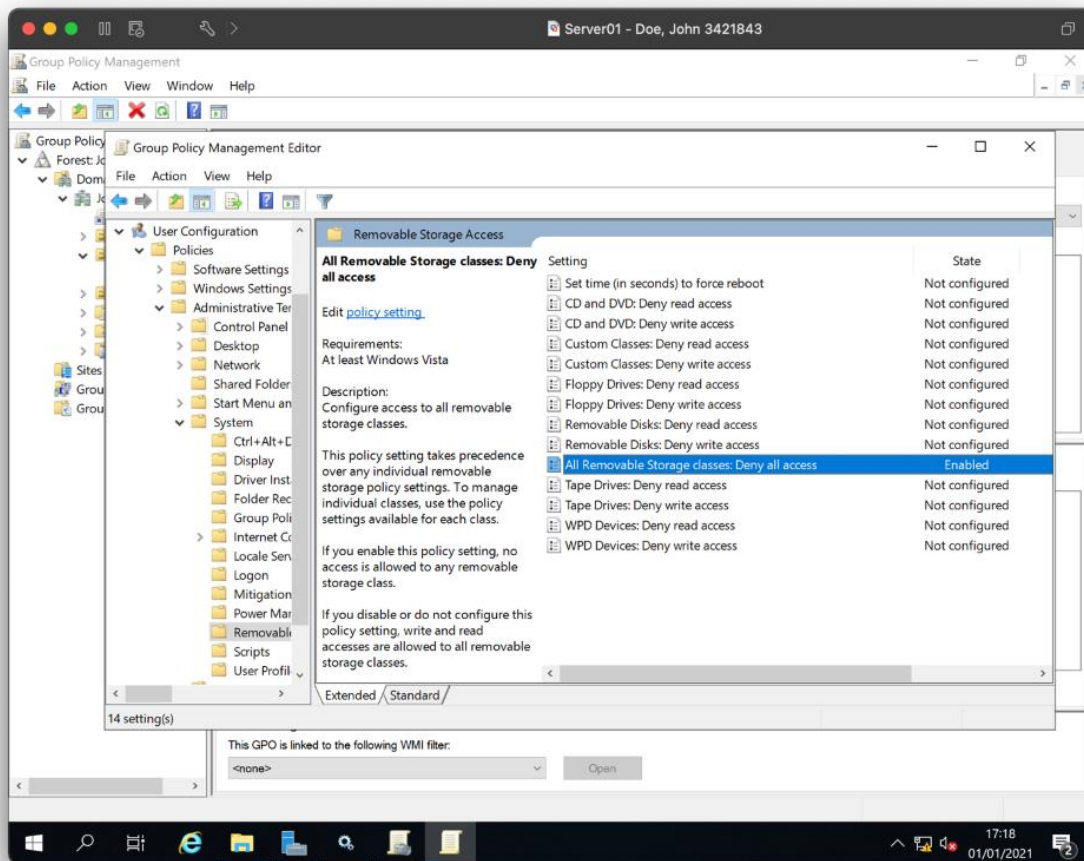

Step G
SNMP

Step H

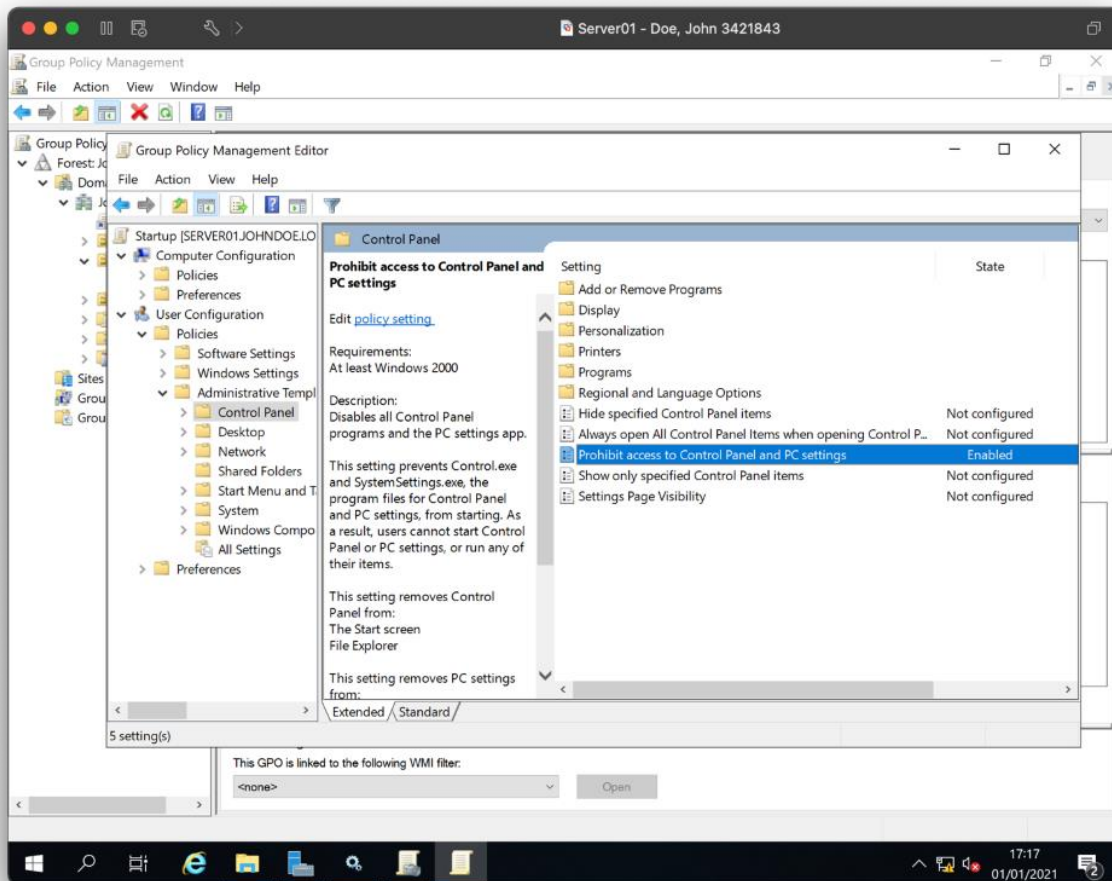

Policy 1 – disable USB support

Print screen on Server01 showing the blocking of removable devices have been enabled in group policy

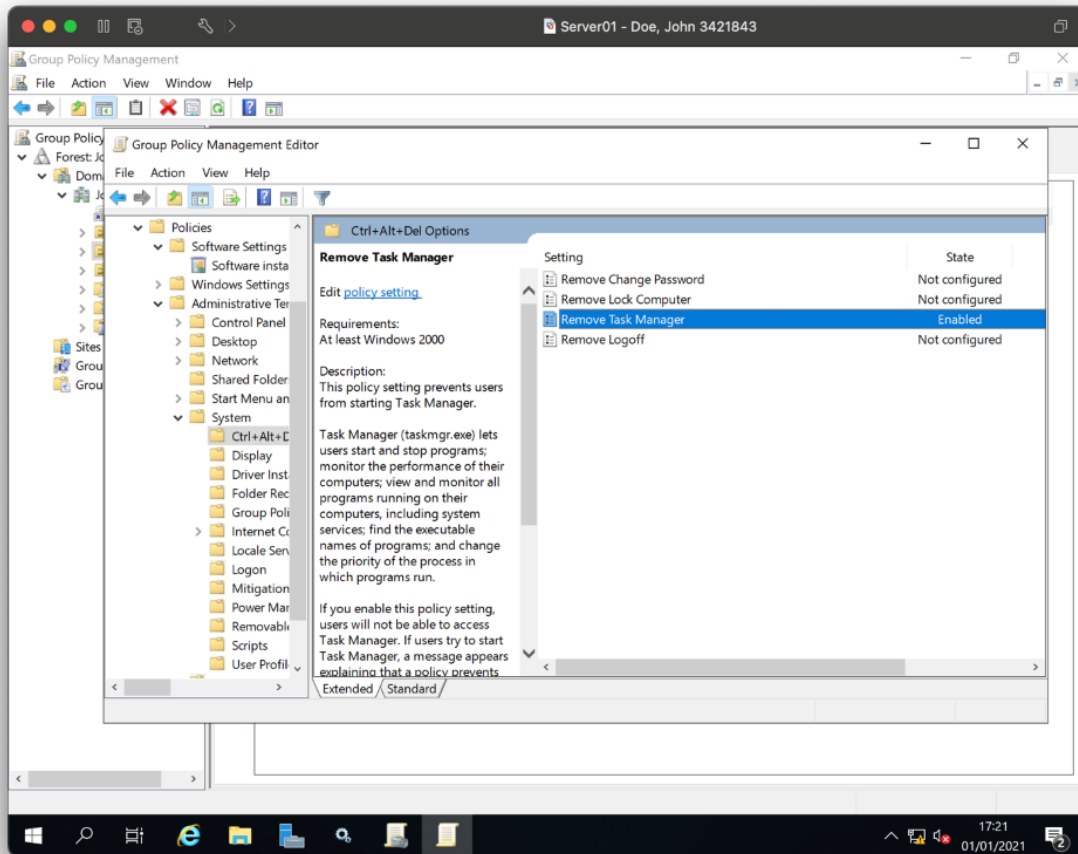

Policy 2 – disable access to the control panel

Print screen on Server01 showing control panel access have been enabled in group policy

Policy 3 - disable task manager access

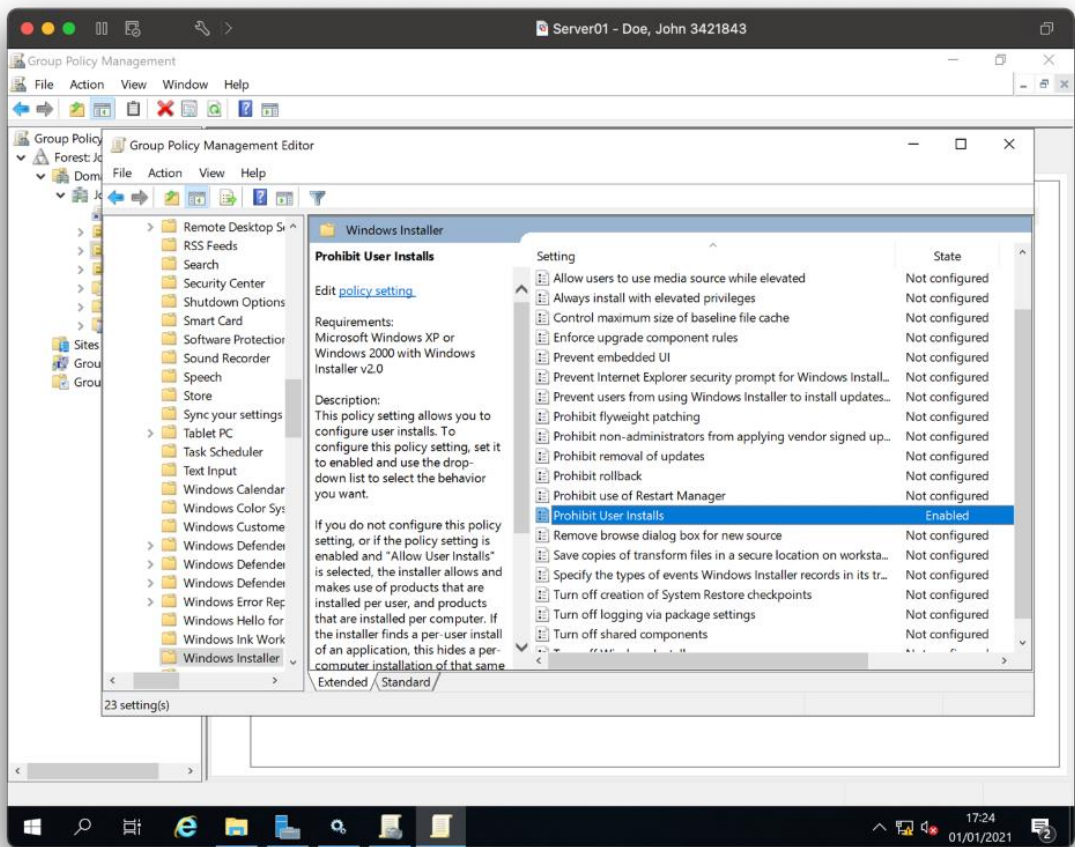

Print screen on Server01 showing that task manager access is denied in group policy

Policy 4

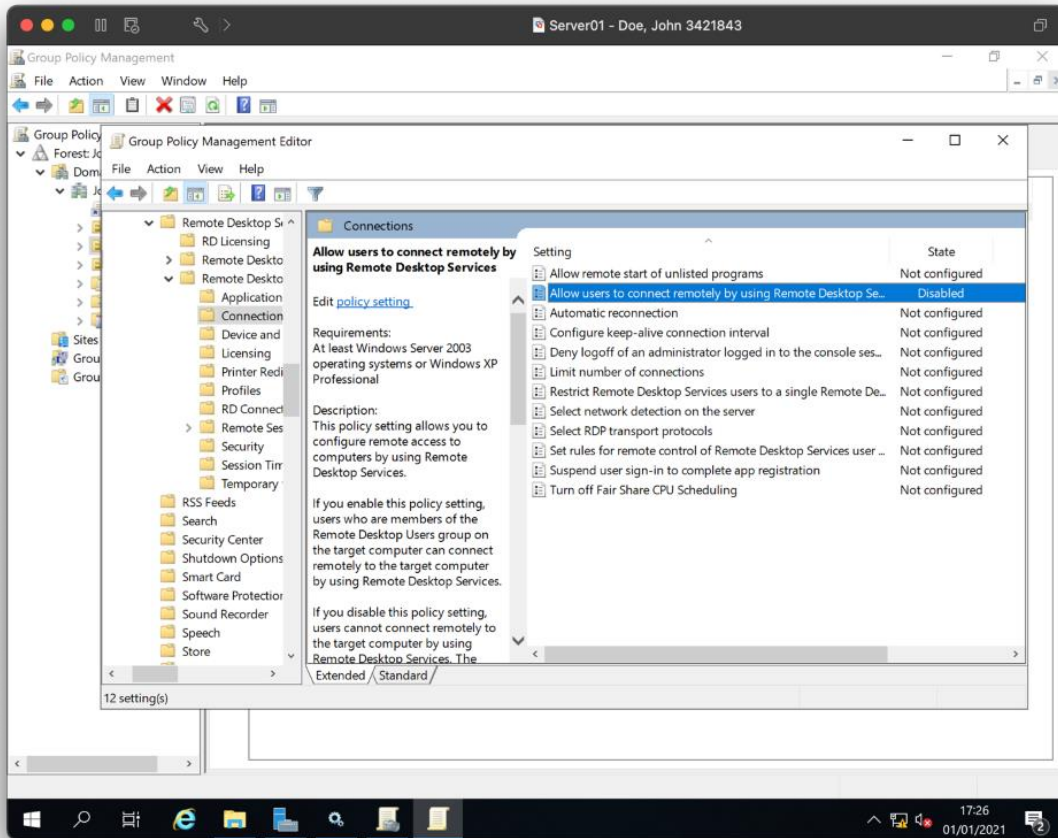

Prevent the installing of applications

Print screen on Server01 showing the prevention of installing applications in group policy

Policy 5 - disable remote desktop

Print screen on Server01 showing remote desktop has been disabled in group policy

Task sequence

Step A

(3 marks)

Processes	Settings	Marks	Evidence required
Install the provided server operating system on Server01 and Server02 Use suitable configurations that match your current time zone and provide evidence of the successful installation of the server operating system on both Server01 and Server02	All hard disks should be partitioned to a single 100% partition, and the machines named Server01 and Server02 Server01 and Server02 should have fixed IP addresses	1	Provide print screen or photographic evidence of the following: <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Server01 disk partitions <input checked="" type="checkbox"/> Server01 IP address (1) Set <input checked="" type="checkbox"/> Server01 IP address (2) Set <input checked="" type="checkbox"/> Server01 name set <input checked="" type="checkbox"/> Server01 regional settings, date and time
		1	<ul style="list-style-type: none"> <input checked="" type="checkbox"/> Server02 disk partitions <input checked="" type="checkbox"/> Server02 IP address set <input checked="" type="checkbox"/> Server02 name set <input checked="" type="checkbox"/> Server02 regional settings, date and time
Install the provided desktop operating system on PC01	All hard disks should be partitioned to a single 100% partition Use suitable region-specific settings, otherwise the defaults should be taken	1	Provide print screen or photographic evidence of the following: <ul style="list-style-type: none"> <input checked="" type="checkbox"/> PC01 disk partitions <input checked="" type="checkbox"/> PC01 name set <input checked="" type="checkbox"/> PC01 regional settings, date and time

Step B

(8 marks)

Processes	Settings	Marks	Evidence required
Install and configure DNS		8	<input checked="" type="checkbox"/> print screen showing DNS has been installed
Install and configure a directory service	Install a directory service with the domain name set as (First nameSurname).local, for example: JohnSmith.local		<input checked="" type="checkbox"/> print screen showing the directory service has been installed and configured
Install DHCP service on Server01			<input checked="" type="checkbox"/> print screen showing the DHCP service installed
Implement a DHCP scope using the IP range provided earlier			<input type="checkbox"/> print screen showing the DHCP scope configured
Evidence PC01 is using DHCP to join the network			<input checked="" type="checkbox"/> print screen showing PC01 has been assigned a DHCP address
Domain join Server02 and PC01 to Server01 forming the start of the network			<input checked="" type="checkbox"/> print screen showing Server02 domain joined <input checked="" type="checkbox"/> print screen showing PC01 domain joined
Install and confirm a reverse DNS lookup works on Server02 using NSLOOKUP			<input type="checkbox"/> print screen showing Server02 successfully completed a reverse lookup

(8 marks)

Processes	Settings	Marks	Evidence required

<p>Create the following groups in your directory service</p>	<p>All staff, developer, graphics, motion capture, IT admin</p>	<p>1</p>	<p><input checked="" type="checkbox"/> print screen showing the 5 groups created in your directory service</p>
--	---	-----------------	--

Populate the directory service with the following user accounts making sure they are added to the correct group and each user has the right privilege:

User account	Privileges	Job description	Group
Your first and surname	Administrator	IT admin	IT admin
Paul James	Standard user	Developer	Development
Tamara Jacobs	Standard user	Graphics artist	Graphics
Yousif Sobbah	Standard user	Motion capture specialist	Motion capture

1

- print screen evidence that each user has the correct name, privilege, job description and has been added to the correct group

<p>Using the group called all staff, add the following groups to this group:</p> <ul style="list-style-type: none"> • development • graphics • motion capture • IT admin 	<p>1</p>	<p><input type="checkbox"/> print screen showing all 5 groups added to the all staff group</p>
---	-----------------	--

Processes	Settings	Marks	Evidence required
<p>Create the following folder structure on second partition of Server02</p> <div style="text-align: center; margin: 20px 0;"> <pre> graph TD D[D:\] --> SF[Shared Folders] SF --> Dev[Development] SF --> Graf[Graphics] SF --> MC[Motion Capture] SF --> SD[Shared Drive] SF --> IS[IT Support] IS --> UG[User Guides] IS --> IA[IT Admin] </pre> </div>		<p>N/A</p>	<p>Marks are not awarded for creating the folder structure and you do not need to submit evidence for this task</p>

Processes	Settings	Marks	Evidence required																					
Apply the following privileges to each of the folders using the groups created earlier	<table border="1"> <thead> <tr> <th data-bbox="439 336 741 403">Folder</th> <th data-bbox="750 336 1077 403">Group</th> <th data-bbox="1086 336 1373 403">Permission</th> </tr> </thead> <tbody> <tr> <td data-bbox="439 410 741 469">Development</td> <td data-bbox="750 410 1077 469">IT admin</td> <td data-bbox="1086 410 1373 469">Read/Write</td> </tr> <tr> <td data-bbox="439 475 741 534">Graphics</td> <td data-bbox="750 475 1077 534">Development</td> <td data-bbox="1086 475 1373 534">Read/Write</td> </tr> <tr> <td data-bbox="439 541 741 600">Motion Capture</td> <td data-bbox="750 541 1077 600">Motion Capture</td> <td data-bbox="1086 541 1373 600">Read/Write</td> </tr> <tr> <td data-bbox="439 606 741 665">Shared Drive</td> <td data-bbox="750 606 1077 665">All staff</td> <td data-bbox="1086 606 1373 665">Read</td> </tr> <tr> <td data-bbox="439 671 741 730">User Guides</td> <td data-bbox="750 671 1077 730">All staff</td> <td data-bbox="1086 671 1373 730">Read</td> </tr> <tr> <td data-bbox="439 737 741 796">IT admin</td> <td data-bbox="750 737 1077 796">IT admin</td> <td data-bbox="1086 737 1373 796">Read/Write</td> </tr> </tbody> </table>	Folder	Group	Permission	Development	IT admin	Read/Write	Graphics	Development	Read/Write	Motion Capture	Motion Capture	Read/Write	Shared Drive	All staff	Read	User Guides	All staff	Read	IT admin	IT admin	Read/Write	1	<input checked="" type="checkbox"/> print screens showing each folder with correct privileges
Folder	Group	Permission																						
Development	IT admin	Read/Write																						
Graphics	Development	Read/Write																						
Motion Capture	Motion Capture	Read/Write																						
Shared Drive	All staff	Read																						
User Guides	All staff	Read																						
IT admin	IT admin	Read/Write																						
Using the files provided, populate the folder structure																								
Using the test plan template provided in the workbook, prove that the privileges work correctly using both a valid and invalid user Note: the shared drive only requires a valid user to be tested		4	<input checked="" type="checkbox"/> completed test plan <input checked="" type="checkbox"/> print screens showing folder privileges have been tested																					

Step D

(3 marks)

Processes	Settings	Marks	Evidence required
Using an external hard disk drive or an additional virtual disk to Server02, implement a scheduled backup of the shared folders to run every hour to the second physical hard or external storage device		3	<input checked="" type="checkbox"/> print screen showing scheduled backup set
Confirm the backup has been taken successfully by restoring the contents of the backup Note: You might need to return to this step later to collect the required evidence			<input checked="" type="checkbox"/> print screens showing a successful backup <input checked="" type="checkbox"/> print screens showing a successful restoration

Step E

(4 marks)

Processes	Settings	Marks	Evidence required
Using Server02, install and configure a single application service from the following list:	<ul style="list-style-type: none"> • desktop deployment • media server • database server • IT helpdesk • web server • print server 	4	<input type="checkbox"/> print screens showing the service being installed and configured
			<input type="checkbox"/> print screens showing the service is running <input type="checkbox"/> print screens showing the service being tested
Prove the service has been tested and works			

Step F

(2 marks)

Processes	Settings	Marks	Evidence required
Create a remote connection from PC02 to Server01 Note: you are not permitted to domain join the computer		2	<input checked="" type="checkbox"/> print screens showing the remote connection process

Step G

(4 marks)

Processes	Settings	Marks	Evidence required

Implement a SNMP on all machines on the network		4	<input type="checkbox"/> print screens from PC01 and Server02 showing that SNMP has been enabled
Verify that SNMP data is being collected by the traps and can be viewed			<input type="checkbox"/> a series of print screens showing the SNMP data is being collected centrally

(10 marks)

Processes	Settings	Marks	Evidence required
Using policies, implement 5 rules that will make the domain joined PC01 more secure		10	<input checked="" type="checkbox"/> provide a short description of each policy and what it will achieve <input checked="" type="checkbox"/> provide a print screen showing each of the policies created on Server01
Carry out testing to prove the policies have been applied correctly			<input checked="" type="checkbox"/> provide evidence of each policy applied on PC01

Step I

(7 marks)

Processes	Settings	Marks	Evidence required
Using the wireless device provided, integrate the device into your network		7	Provide print screen or photographic evidence of the following: <ul style="list-style-type: none"> <input checked="" type="checkbox"/> set an IP address for the device <input checked="" type="checkbox"/> connect to a wireless AP or other such device <input checked="" type="checkbox"/> install the required drivers or management software <input checked="" type="checkbox"/> configure the device with suitable settings <input type="checkbox"/> evidence that SNMP data is being captured
Test that the device works and is accessible from any 2 machines			<input type="checkbox"/> a series of print screens and photographs showing connection and configuration of the wireless device

Examiner commentary

The student has achieved the required standard for the following reasons:

- the majority of the process for the network cable creation is good. This is clear that the student did have an appreciation of the process but lacked the full technique
- the early tasks of the assignment have been carried out to a good level and show a good level of skills for example, initial installation and configuration of the operating system
- the higher-level skills seemed to be missing, for example the reverse lookup zone was clearly not attempted. This is a pattern throughout, the lower-level tasks have been completed to a good level but when the topics get complicated the skills are lacking
- a little careless as the student had missed the step of configuring DHCP, hence PC01 being assigned a manual IP address
- either based on a lack of time, organisation or a lack of skill, a number of the tasks have been missed which has reduced the marks available
- the presentation of the work was very clear, organised and should be commended

To achieve a higher score, the student could have:

- provided evidence of attempting the reverse lookup for DNS
- provided evidence of configuration of the role, evidence of role activation, evidence of role testing for role installation
- provided evidence of attempting SNMP
- demonstrated competency in installing and configuring the wireless printer through comments

Grade descriptors

The performance outcomes form the basis of the overall grading descriptors for pass and distinction grades.

These grading descriptors have been developed to reflect the appropriate level of demand for students of other level 3 qualifications, the threshold competence requirements of the role and have been validated with employers within the sector to describe achievement appropriate to the role.

Grade	Demonstration of attainment
Pass	The evidence showing installations and configuration setup is logical and displays sufficient knowledge in response to the demands of the brief.
	The student makes some use of relevant knowledge and understanding of implementing network infrastructure but demonstrates adequate understanding of perspectives or approaches associated with industry standards in digital infrastructure roles.
	The student makes adequate use of facts/theories/approaches/concepts and attempts to demonstrate breadth and depth of knowledge and understanding in their implementations and

	configurations.
	The student is able to identify some information from appropriate sources and apply the appropriate information/appraise relevancy of information and can combine information to make some decisions.
	The student makes sufficient judgements/takes appropriate action/seek clarification with guidance and is able to make adequate progress towards prioritising and solving non-routine problems in real life situations.
	The student attempts to demonstrate skills and knowledge of the relevant concepts and techniques to plan, install, configure, deploy and populate network infrastructure and generally applies this across different contexts.
	The student shows adequate understanding of unstructured problems that have not been seen before, using sufficient knowledge to attempt to prioritise and solve problems with some attempt at verifying their implementations.
Distinction	The evidence is precise, logical showing installations, configuration and deployment that provides a detailed and informative response to the demands of the brief.
	The student makes extensive use of relevant knowledge and has extensive understanding of the practices of the sector and demonstrates a depth of understanding a threshold competency of the different perspectives/approaches associated with installing, testing, monitoring and maintaining digital infrastructure.
	The student makes decisive use of facts/theories/approaches/concepts, demonstrating extensive breadth and depth of knowledge and understanding and selects highly appropriate skills/techniques/methods to apply network infrastructure practices.
	The student is able to comprehensively identify information from a range of suitable sources and makes exceptional use of appropriate information/appraises relevancy of information and can combine information to make coherent decisions.
	The student makes well-founded judgements/takes appropriate action/seek clarification and guidance and is able to use that to reflect on real life situations in a digital infrastructure role; being able to apply implementation and configuration of the network.
	The student demonstrates extensive knowledge of relevant concepts and techniques reflected in a digital infrastructure role and precisely applies this across a variety of contexts and tackles unstructured problems that have not been seen before, using their knowledge to analyse and find suitable solutions to the problems.
	The student can thoroughly examine data/information in context and apply appropriate analysis in confirming or refuting conclusions and carrying out further work to justify and evaluate strategies for solving problems, giving concise explanations for their reasoning.

* “Threshold competence” refers to a level of competence that:

- signifies that a student is well placed to develop full occupational competence, with further support and development, once in employment

- is as close to full occupational competence as can be reasonably expected of a student studying the TQ in a classroom-based setting (for example, in the classroom, workshops, simulated working and (where appropriate) supervised working environments)
- signifies that a student has achieved the level for a pass in relation to the relevant occupational specialism component

U grades

If a student is not successful in reaching the minimum threshold for the core and/or occupational specialism component, they will be issued with a U grade.
